Sustainable Built Environment and Urban Growth Management Wann-Ming Wey,2020-02-21 Nowadays

the sustainable built environment planning in most cities has come to a turning point as the growth in traffic and population has become a serious concern and put tremendous pressure on both the environment and people in these cities. It is therefore important to find new ways or lifestyles such as compact city transit oriented development TOD formulations that are more flexible inclusive and sustainable. Furthermore for the sustainable built environment and urban growth management not only should the growth management principles which include smart growth sustainable growth and inclusive growth be taken into account but innovative smart planning strategies such as mixed use design green transport and new urbanism are also utilized in planning sustainable built environments in order to prevent the urban sprawl development that has occurred.

Comparative Analysis of Technological and Intelligent Terrorism Impacts on Complex Technical Systems N.A.

Makhutov, G.B. Baecher, 2013-01-10 Insider knowledge about a complex technical system coupled with access to its elements has the potential to be used for triggering the most disastrous of terrorist attacks. Technological terrorism is the unauthorized impact on a complex technical system with the intention of breaking down its protection and initiating secondary catastrophic processes to cause damage and loss outside the facility. Intelligent terrorism on the other hand is the unauthorized purposeful interference in the processes of design construction or maintenance of a complex technical system and is either aimed at increasing existing vulnerabilities or creating new ones. This book is based on the NATO Advanced Research Workshop ARW on Comparative Analysis of Technological and Intelligence Terrorism Impacts on Complex Technical Systems. It lays the foundation for a risk informed approach to modeling analyzing managing and controlling complex technical systems in the face of terrorist attacks. To formulate such an approach it is necessary to combine the insights of a spectrum of disciplines across engineering human and social sciences and economics. The book explains how an understanding of the vulnerabilities of complex technical systems to terrorist attack can reduce these vulnerabilities and contain or limit the impact of terrorism and also the way in which such an understanding is crucial to the development of a set of design criteria and codes which will take such vulnerabilities into account. The book also identifies areas of further research and opportunities for future exchange and collaboration.
