Increasing urbanization throughout the world the depletion of fossil fuels and concerns about global warming have transformed the city into a physical problem of prime importance This book proposes a multi disciplinary and systematic approach concerning specialities as different as meteorology geography architecture and urban engineering systems all surrounding the essential problem of solar radiation It collects the points of view of 18 specialists from around the world on the interaction between solar energy and constructions combining territorial urban and architectural scales to better regulate energetic efficiency and light comfort for the sustainable city The main subjects covered are measures and models of solar irradiance satellite observations territorial and urban ground measurements sky models satellite data and urban mock up radiative contribution to the urban climate local heat balance radiative aerodynamics coupling evapotranspiration Urban Heat Island light and heat modeling climate based daylight modeling geometrical models of the city solar radiation modeling for urban environments thermal simulation methods and algorithms and urban planning with special considerations for solar potential solar impact and daylight rights in the temperate northern and tropical climates and the requirement of urban solar regulation Handbook

of Solar Energy G. N. Tiwari, Arvind Tiwari, Shyam, 2016-06-27 This handbook aims at providing a comprehensive resource on solar energy. Primarily intended to serve as a reference for scientists, students, and professionals, the book in parts can also serve as a text for undergraduate and graduate course work on solar energy. The book begins with availability, importance, and applications of solar energy, definition of sun and earth angles, and classification of solar energy as thermal and photon energy. It then goes on to cover day lighting parameters, laws of thermodynamics including energy and exergy analysis, photovoltaic modules and materials, PVT collectors, and applications such as solar drying and distillation. Energy conservation by solar energy and energy matrices based on overall thermal and electrical performance of hybrid system are also discussed. Techno-economic feasibility of any energy source is the backbone of its success, and hence economic analysis is covered. Some important constants such as exercises and problems increase the utility of the book as a text. *Mechanical and Electrical Equipment for Buildings* Walter T. Grondzik, Alison G. Kwok, 2014-10-06 The definitive guide to environmental control systems, updated with emerging technology and trends.
