The Anthropology of

Disasters in Latin America Virginia García-Acosta, 2019-12-09 This book offers anthropological insights into disasters in Latin America. It fills a gap in the literature by bringing together national and regional perspectives in the study of disasters. The book essentially explores the emergence and development of anthropological studies of disasters. It adopts a methodological approach based on ethnography, participant observation, and field research to assess the social and historical constructions of disasters and how these are perceived by people of a certain region. This regional perspective helps assess long-term dynamics, regional capacities, and regional/global interactions on disaster sites. With chapters written by prominent Latin American anthropologists, this book also considers the role of the state and other nongovernmental organizations in managing disasters and the specific conditions of each country relative to a greater or lesser incidence of disastrous events. Globalizing the existing literature on disasters with a focus on Latin America, this book offers multidisciplinary insights that will be of interest to academics and students of geography, anthropology, sociology, and political science.

Disasters and the Small Dwelling Yasemin Aysan, 2013-10-18 This book contains the proceedings of the conferences on Disasters and the Small Dwelling held at Oxford in September 1990. The volume thus defines an international agenda to achieve safer low-income dwellings in the course of the 1990s, designated International Decade for Natural Disaster Reduction by the UN. It will be essential reading for anyone, whether governmental or non-governmental agency officials, academic researchers, representatives of private industry, or consultants whose work involves analysis, shelter mitigation, and reconstruction programmes for low-income dwellings in disaster-prone areas.

The three catastrophes of Chernobyl (26 April 1986), Fukushima Daiichi (11 March 2011), and in the Gulf of Mexico, explosion of the drilling platform Deepwater Horizon (20 April 2010) have shaken this world view. Who directed this development? Is it a matter of human error or technical failure? For the answer, approaches from the natural sciences and the humanities are presented.

Disasters in World History Benjamin Reilly, 2024-08-27 Disasters in World History surveys the development of disaster studies as a discipline, as well as presenting historical case studies and theories used by historians to understand disasters. Disasters here defined as the complex interaction between natural hazards and specific human vulnerabilities have frequently left a mark on human history. Cataclysms have toppled dynasties, fueled massacres, and shaped the culture of societies frequently affected by natural hazards. This volume fosters understanding of such events by considering both social science theory and the natural science concepts relevant to disaster studies. In addition, the text makes heavy use of an emerging psychological theory relevant to disaster studies: the behavioral immune system, which helps to explain why xenophobic behavior and even violence often
