Cibse Lighting Guide Lg6

Derek Phillips

Cibse Lighting Guide Lg6:

The Colour, Light and Contrast Manual Keith Bright, Geoffrey Cook, 2010-01-06 Endorsed by the Society of Light and Lighting this practical book offers comprehensive guidance on how colour light and contrast can be incorporated within buildings to enhance their usability. The book provides state of the art clear guidance as well as a valuable information source for busy professionals involved in the design or management of new and existing environments. The ways colour light and contrast are used within built environments are critical in determining how people interact with the space and how confident safe and secure they will feel when doing so. They also have a major influence on a person's sense of well being and their ability to use the environment independently and without undue effort. Understanding how to use colour and contrast and how they are influenced by both natural and artificial lighting is vital for all those involved in the design and management of the environments and spaces we all use. In recent years there has been a considerable amount of work undertaken to further our understanding of how colour light and contrast affect emotion and sensory abilities and how they can assist or hinder people in their everyday lives. Other publications consider these issues individually but The Colour Light and Contrast Manual designing and managing inclusive built environments draws knowledge and information together to produce a unique comprehensive and informative guide to how the three elements can work together to improve the design and management of environments for us all. The Lit Environment Derek Phillips, 2002 Building on the success of his previous two books in this series The Lit Environment sees Derek Phillips approaching the topic of exterior lighting. This book addresses the issues raised by the perception of light experienced by people who are outside buildings. It is not simply about floodlighting buildings but takes a more embracing approach to deal with light for the whole external environment. Covers a comprehensive range of buildings through 30 international case studies including buildings in Britain France Germany Denmark Israel Egypt and the United States. The book represents a strong fusion of science and quantity with light and vision. Visually inclined designers should understand how science can improve their vision and engineers with a strong science basis should understand how they can come to terms with visual affects. This book illustrates the essence of how to light buildings well. Benefit from the experience and knowledge of a top architect and lighting engineer. Gain an understanding of the design principles involved with this comprehensive overview of exterior lighting. International case studies from Lyon to Tel Aviv as well as the United States show theory in practice.
