WARNING

The independent front wheel must be adjusted on the brake drum side. This should be adjusted with the parking brake set using the locking bar B at that wheel used together on the highway, there is no tendency to wobble. Frangible use of one of the lockers for steering resistance will cause the brake to wear more quickly, and to increase rate of adjustment one with the other. This should be checked as soon as it becomes evident. Check regular checks weekly and also before putting a trailer.

Jack up both rear wheels and with the vehicle level, push them approximately 1/2 in. (12 mm) full on the front brake (not sufficient to "lock" the brake in this position). At the front end of the brake only, put under each foot plate, release the locknuts A, Fig. 5-15 and adjust each adjusting
