Bradley Penuel,Matt

Statler,Ryan Hagen,2013-02-14 Although now a growing and respectable research field crisis management as a formal area of study is relatively young having emerged since the 1980s following a succession of such calamities as the Bhopal gas leak Chernobyl nuclear accident Space Shuttle Challenger loss and Exxon Valdez oil spill Analysis of organizational failures that caused such events helped drive the emerging field of crisis management Simultaneously the world has experienced a number of devastating natural disasters Hurricane Katrina the Japanese earthquake and tsunami etc From such crises both human induced and natural we have learned our modern tightly interconnected and interdependent society is simply more vulnerable to disruption than in the past This interconnectedness is made possible in part by crisis management and increases our reliance upon it As such crisis management is as beneficial and crucial today as information technology has become over the last few decades Crisis is varied and unavoidable While the examples highlighted above were extreme we see crisis every day within organizations governments businesses and the economy A true crisis differs from a routine emergency such as a water pipe bursting in the kitchen Per one definition it is associated with urgent high stakes challenges in which the outcomes can vary widely and are very negative at one end of the spectrum and will depend on the actions taken by those involved Successfully engaging dealing with and working through a crisis requires an understanding of options and tools for individual and joint decision making Our Encyclopedia of Crisis Management comprehensively overviews concepts and techniques for effectively assessing analyzing managing and resolving crises whether they be organizational business community or political From general theories and concepts exploring the meaning and causes of crisis to practical strategies and techniques relevant to crises of specific types crisis management is thoroughly explored Features the electronic version

Flood Early Warning Systems Daniela Molinari, Scira Menoni, Francesco Ballio, 2013 Presenting the results of an ambitious research activity this book intends to understand why Early Warning Systems EWSs fail However from the beginning the objective turned out to be challenging first because so far there is not a shared understanding of what an EWS is among both researchers and practitioners communities second as a consequence because it is equally unclear when an EWS can be considered successful or not Due to this the research needed first to face some open questions instead of going straight to the point under investigation Specifically it was first necessary to define EWS identify its components and functions peculiarities and weak points Only at that point a first attempt to evaluate EWS performance was possible Flood Early Warning Systems Performance is organised according to the conceptual steps required by the research In part I the open questions about the definition and the role of EWSs are handled the aim being the identification of how to evaluate their effectiveness performance Part II focuses on the real aim of the research providing concepts and tools to assess EWS performance suggested tools are also implemented in a case study to describe how they can be applied in practice Focusing specifically on the topic of flood risk in mountainous regions the book can be viewed as a sort of manual for EWS designers managers and users It is organised into different independent sections which will appeal both to experts as well as those with an interest in the subject Most of results can also be exported to other hazards
