Critical Appraisal Of Epidemiological Studies And Clinical Trials:

Critical Appraisal of Epidemiological Studies and Clinical Trials Mark Elwood, 2017-03-01 Since publication of the first three editions of this hugely successful book systematic methods of critical appraisal have been accepted as central to healthcare provision both in critical applications and in a wider health services and community perspective This new edition builds on the work of the previous editions by presenting a fully updated and accessible system of critical appraisal applicable to clinical epidemiological and public health studies and related fields The book outlines the systematic review process for the establishment of causal effect within single and multiple studies Focusing primarily on study design it covers randomized and non randomized trials cohort studies case control studies and surveys showing the presentation of results including person time and survival analysis and issues in the selection of subjects It then describes the process of detection and assessment of selection biases observation bias confounding chance variation and how to determine internal validity and external validity generalizability Statistical methods are presented in an accessible way illustrating applications to each study design Positive features of causation including strength dose response and consistency are also discussed The final chapters provide six examples of critical appraisals of major studies encompassing randomized trials prospective and retrospective cohort studies and case control studies Statistical issues are explained clearly without complex mathematics and the most useful methods are summarized in the appendix each with a worked example Each main chapter includes self test questions with answers provided making the book ideally suited to readers with no prior epidemiological or statistical knowledge Developed over four editions *Critical Appraisal of Epidemiological Studies and Clinical Trials* is an invaluable aid to the effective assessment of new studies in epidemiology public health research methods evidence based methods clinical medicine and environmental health making it essential reading for postgraduates practitioners and policymakers in these fields

Critical Appraisal of Epidemiological Studies and Clinical Trials J. Mark Elwood, 2007 This book presents a logical system of critical appraisal to allow readers to evaluate studies and to carry out their own studies more effectively This system emphasizes the central importance of cause and effect relationships Its great strength is that it is applicable to a wide range of issues and both to intervention trials and observational studies This system unifies the often different approaches used in epidemiology health services research clinical trials and evidence based medicine starting from a logical consideration of cause and effect The author's approach to the issues of study design selection of subjects bias confounding and the place of statistical methods has been praised for its clarity and interest Systematic reviews meta analysis and the applications of this logic to evidence based medicine knowledge based health care and health practice and policy are discussed Current and often controversial examples are used including screening for prostate cancer publication bias in psychiatry public health issues in developing countries and conflicts between observational studies and randomized trials Statistical issues are explained clearly without complex mathematics and the most useful methods are summarized in the
