Mathematical Structures for Computer Graphics Steven J. Janke,2014-09-18 A comprehensive exploration of the mathematics behind the modeling and rendering of computer graphics scenes Mathematical Structures for Computer Graphics presents an accessible and intuitive approach to the mathematical ideas and techniques necessary for two and three dimensional computer graphics Focusing on the significant mathematical results the book establishes key algorithms used to build complex graphics scenes Written for readers with various levels of mathematical background the book develops a solid foundation for graphics techniques and fills in relevant graphics details often overlooked in the literature Rather than use a rigid theorem proof approach the book provides a flexible discussion that moves from vector

geometry through transformations curve modeling visibility and lighting models Mathematical Structures for Computer Graphics also includes Numerous examples of two and three dimensional techniques along with numerical calculations Plenty of mathematical and programming exercises in each chapter which are designed particularly for graphics tasks Additional details at the end of each chapter covering historical notes further calculations and connected concepts for readers who wish to delve deeper Unique coverage of topics such as calculations with homogeneous coordinates computational geometry for polygons use of barycentric coordinates various descriptions for curves and L system techniques for recursive images Mathematical Structures for Computer Graphics is an excellent textbook for undergraduate courses in computer science mathematics and engineering as well as an ideal reference for practicing engineers researchers and professionals in computer graphics fields The book is also useful for those readers who wish to understand algorithms for producing their own interesting computer images

Real-Time Graphics Rendering Engine Hujun Bao, Wei Hua, 2011-12-07 Real Time Graphics Rendering Engine reveals the software architecture of the modern real time 3D graphics rendering engine and the relevant technologies based on the authors experience developing this high performance real time system The relevant knowledge about real time graphics rendering such as the rendering pipeline the visual appearance and shading and lighting models are also introduced This book is intended to offer well founded guidance for researchers and developers who are interested in building their own rendering engines Hujun Bao is a professor at the State Key Lab of Computer Aided Design and Computer Graphics Zhejiang University China Dr Wei Hua is an associate professor at the same institute

Real-Time Rendering, Fourth Edition Tomas Akenine-Möller, Eric Haines, Naty Hoffman, 2018-08-06 Thoroughly updated this fourth edition focuses on modern techniques used to generate synthetic three dimensional images in a fraction of a second With the advent of programmable shaders a wide variety of new algorithms have arisen and evolved over the past few years This edition discusses current practical rendering methods used in games and other applications It also presents a solid theoretical framework and relevant mathematics for the field of interactive computer graphics all in an approachable style New to this edition new chapter on VR and AR as well as expanded coverage of Visual Appearance Advanced Shading Global Illumination and Curves and Curved Surfaces
