Combinatorics of Finite Sets Ian Anderson, 2002-01-01 Among other subjects explored are the Clements Lindström extension of the Kruskal Katona theorem to multisets and the Greene Kleitman result concerning k saturated chain partitions of general partially ordered sets Includes exercises and solutions

Hypergraphs C. Berge, 1984-05-01 Graph Theory has proved to be an extremely useful tool for solving combinatorial problems in such diverse areas as Geometry Algebra Number Theory Topology Operations Research and Optimization It is natural to attempt to generalise the concept of a graph in order to attack additional combinatorial problems The idea of looking at a family of sets from this standpoint took shape around 1960 In regarding each set as a generalised edge and in calling the family itself a hypergraph the initial idea was to try to extend certain classical results of Graph Theory such as the theorems of Turán and Kőnig It was noticed that this generalisation often led to simplification moreover one single statement sometimes remarkably simple could unify several theorems on graphs This book presents what seems to be the most significant work on hypergraphs

Combinatorics of Finite Sets Hunter Saint Clair Snevily, 1991 Let $\mathcal{A}$ be a collection of subsets of an n set and let $\mathcal{B}$ represent the subset lattice of n with sets ordered by inclusion A collection I of subsets of n is called an ideal if every subset of a member of I is also in I An intersecting family S in $\mathcal{B}$ is called a star if there exists an element of n belonging to every member of S and it is a 1 star if the intersection of every two members of I is exactly that element Chvátal conjectured that if I is any ideal then among the intersecting subfamilies of I of maximum cardinality there is a star In Chapter 1 we prove Chvátal's conjecture for several special cases Let I be an ideal in $\mathcal{B}$ that is compressed with respect to a given element We prove that among the largest intersecting families of I there is a star We also prove that if the maximal elements $B_1, \dots, B_q$ of an ideal I can be partitioned into two 1 stars then I satisfies Chvátal's conjecture In Chapter 2 we consider the following two conjectures concerning intersecting families of a finite set Conjecture 1 Frankl and Füredi 18 Given n, k let $\mathcal{A}$ be a collection of subsets of an n set such that $1 \leq |A \cap B| \leq k$ for all A, B in $\mathcal{A}$ Then $| \mathcal{A} | \leq \binom{n}{k}$ where $\binom{n}{k} = \sum_{i=0}^k \binom{n-1}{i}$ Conjecture 2 Snevily Let $S_1, \dots, S_k$ be a collection of k positive integers If $\mathcal{A}$ is a collection of subsets of X such that $|A \cap B| \in S_i$ for all A, B in $\mathcal{A}$ then $| \mathcal{A} | \leq \binom{n}{k}$ We prove that Conjecture 1 is true when $n \geq 5k^2 - 3k + 1$ We prove necessary conditions for possible counterexamples to Conjecture 2 when n is sufficiently large Let $\mathcal{B}_k$ denote the bipartite graph whose vertices are the k and $k+1$ sets of $2k+1$ with edges specified by the inclusion relationship Erdős conjectured that $\mathcal{B}_k$ contains a Hamiltonian cycle Any such cycle must be composed of two matchings between the middle levels of the Boolean lattice We study such matchings that are invariant under cyclic permutations of the ground set We then construct a new class of matchings called modular matchings and show that these are nonisomorphic to the lexical matchings We describe the orbits of the modular matchings under automorphisms of $\mathcal{B}_k$ and we also construct an example of a matching that is neither lexical nor modular Finally we generalize some

results about special vertex labelings that by a theorem of Rosa yield decompositions of the complete graph K_{2n} into isomorphic copies of certain specified graphs Extremal Problems for Finite Sets Peter Frankl, Norihide

Tokushige, 2018-08-15 One of the great appeals of Extremal Set Theory as a subject is that the statements are easily accessible without a lot of mathematical background yet the proofs and ideas have applications in a wide range of fields including combinatorics number theory and probability theory Written by two of the leading researchers in the subject this book is aimed at mathematically mature undergraduates and highlights the elegance and power of this field of study The first half of the book provides classic results with some new proofs including a complete proof of the Ahlswede Khachatrian theorem as well as some recent progress on the Erdos matching conjecture The second half presents some combinatorial structural results and linear algebra methods including the Deza Erdos Frankl theorem application of Rodl's packing theorem application of semidefinite programming and very recent progress obtained in 2016 on the Erdos Szemerédi sunflower conjecture and capset problem The book concludes with a collection of challenging open problems *Finite and Infinite*

Combinatorics in Sets and Logic Norbert W Sauer, R.E. Woodrow, B. Sands, 2012-12-06 This volume contains the accounts of papers delivered at the Nato Advanced Study Institute on Finite and Infinite Combinatorics in Sets and Logic held at the Banff Centre Alberta Canada from April 21 to May 4 1991 As the title suggests the meeting brought together workers interested in the interplay between finite and infinite combinatorics set theory graph theory and logic It used to be that infinite set theory finite combinatorics and logic could be viewed as quite separate and independent subjects But more and more those disciplines grow together and become interdependent of each other with ever more problems and results appearing which concern all of those disciplines I appreciate the financial support which was provided by the NATO Advanced Study Institute programme the Natural Sciences and Engineering Research Council of Canada and the Department of Mathematics and Statistics of the University of Calgary The meeting on Finite and Infinite Combinatorics in Sets and Logic followed two other meetings on discrete mathematics held in Banff the Symposium on Ordered Sets in 1981 and the Symposium on Graphs and Order in 1984 The growing inter relation between the different areas in discrete mathematics is maybe best illustrated by the fact that many of the participants who were present at the previous meetings also attended this meeting on Finite and Infinite Combinatorics in Sets and Logic **Combinatorics of Finite Geometries** Lynn Margaret

Batten, 1997-05-28 *Combinatorics of Finite Geometries* is an introductory text on the combinatorial theory of finite geometry Assuming only a basic knowledge of set theory and analysis it provides a thorough review of the topic and leads the student to results at the frontiers of research This book begins with an elementary combinatorial approach to finite geometries based on finite sets of points and lines and moves into the classical work on affine and projective planes Later it addresses polar spaces partial geometries and generalized quadrangles The revised edition contains an entirely new chapter on blocking sets in linear spaces which highlights some of the most important applications of blocking sets from the initial game theoretic
