Computing Concepts With C Essentials 2nd Edition:

Computing Concepts with C++ Essentials Cay S. Horstmann, 1999 An updated edition of the nuts and bolts C introduction Distilling C down to a core of fundamental data types structures and syntax Cay Horstmann offers an accessible introduction to this complex language so that novices can concentrate on the essentials of programming This new edition focuses less on ccc h and more on ANSI standard C as well as on object orientation The examples included appear in the form of complete ready to run programs *Data Structures and Algorithms in C++* Michael T. Goodrich, Roberto Tamassia, David M. Mount, 2011-02-22 This second edition of Data Structures and Algorithms in C is designed to provide an introduction to data structures and algorithms including their design analysis and implementation The authors offer an introduction to object oriented design with C and design patterns including the use of class inheritance and generic programming through class and function templates and retain a consistent object oriented viewpoint throughout the book This is a sister book to Goodrich Tamassia s Data Structures and Algorithms in Java but uses C as the basis language instead of Java This C version retains the same pedagogical approach and general structure as the Java version so schools that teach data structures in both C and Java can share the same core syllabus In terms of curricula based on the IEEE ACM 2001 Computing Curriculum this book is appropriate for use in the courses CS102 I O B versions CS103 I O B versions CS111 A version and CS112 A I O F H versions **A First Course in Computational Physics and Object-Oriented Programming with C++ Hardback**
