Federico Martín Palmero, 2004-06 Pronto har veinte años desde que se definió de forma oficial el concepto de desarrollo sostenible En este intervalo de tiempo que ha transcurrido desde el Informe Brundtland hay quien ha contabilizado más de doscientas interpretaciones distintas del término para unos se trata de una perogrullada un cliché una frase hecha y hasta un engaño Para otros es así porque define una filosofía y se ha conseguido que el desarrollo sostenible se convierta en un objetivo planetario al que en la actualidad se han adherido prácticamente todos los países porque es bien cierto nadie puede estar en contra de una idea de naturaleza intrínseca tan positivista el desarrollo sin degradación El problema de fondo radica en si en general los gobiernos de todo el mundo incluyendo autoridades regionales y locales son conscientes de a qué se han comprometido y a qué se comprometen Porque el desarrollo sostenible además de partir de valores y prioridades distintas a la planificación económica tradicional se mueve en horizontes temporales y espaciales muy diferentes Esta publicación tiene por finalidad profundizar en estas cuestiones En primer lugar trata de aclarar el concepto su evolución y los sistemas de medición alternativos y propios del desarrollo sostenible centrándose en la huella ecológica como indicador sintético de sostenibilidad fuerte para a continuación proceder a su cálculo y aplicación por vez primera a la comunidad gallega La segunda parte ofrece explicaciones alternativas a los resultados tanto desde un punto de vista estructural como de gestión energética culminando con un análisis de las políticas económicas medioambientales actuales y las perspectivas de futuro ante la inminente aplicación del Protocolo de Kioto
