Cities Risk Planning Recovering Disasters:

Cities at Risk Pierre Filion, Gary Sands, 2016-03-03 As levels of urbanization increase around the world the growing concentrations of population and economic activity increases vulnerability to natural disasters Interdependencies among urban populations mean that damage to the built environment including water sewer and energy infrastructure can affect millions Even if there is no change in the rate of occurrence of natural disasters an unlikely prospect in the face of ongoing climate change the potential for human and economic loss will continue to increase along with the time required to recover How do cities prepare for and recover from natural disasters In this book the authors provide a broad overview of the issues related to the impacts of disasters on cities around the world from assessing risks to accounting for damages The comparative approach across different types of disasters in a range of urban locations is useful in identifying opportunities for policy transfer While there is no one size fits all solution to hazard mitigation valuable lessons can be learned from the experiences of others The chapters emphasize different modes for assessing hazard risk as well as strategies for increasing the resiliency of vulnerable populations Urban Planning for Disaster Recovery Alan March, Maria Kornakova, 2017-05-10

Urban Planning for Disaster Recovery focuses on disaster recovery from the perspective of urban planning an underutilized tactic that can significantly reduce disaster risks The book examines disaster risk reduction DRR in particular the recovery stage of what is widely known as the disaster cycle The theoretical underpinning of the book derives from a number of sources in urban planning and disaster management literature and is illustrated by a series of case studies It consists of five sections each of which opens with a conceptual framework that is followed by a series of supporting and illustrative cases as practical examples These examples both complement and critique the theoretical base provided demonstrating the need to apply the concepts in location specific ways Examines disaster recovery from an urban planning perspective Illustrates key concepts with real world case studies Explores the contributions of experts urban planners NGOs and community members

Cities at Risk Planning for and Recovering from Natural and Human Disasters Pierre Filion, Mark Skidmore, Gary Sands, 2015-11-01 How do cities prepare for and recover from natural disasters In this book the authors provide a broad overview of the issues related to the impacts of disasters on cities around the world from assessing risks to accounting for damages The comparative approach across different types of disasters in a range of urban locations is useful in identifying opportunities for policy transfer While there is no one size fits all solution to hazard mitigation valuable lessons can be learned from the experiences of others The chapters emphasize different modes for assessing hazard risk as well as strategies for increasing the resiliency of vulnerable populations **Recovery from Disaster** Ian Davis, David Alexander, 2015-08-20 Disasters can dominate newspaper headlines and fill our TV screens with relief appeals but the complex long term challenge of recovery providing shelter rebuilding safe dwellings restoring livelihoods and shattered lives generally fails to attract the attention of the public and most agencies On average 650 disasters occur each year They affect

more than 200 million people and cause 166 trillion of damage Climate change population growth and urbanisation are likely to intensify further the impact of natural disasters and add to reconstruction needs Recovery from Disaster explores the field and provides a concise comprehensive source of knowledge for academics planners architects engineers construction managers relief and development officials and reconstruction planners involved with all sectors of recovery including shelter and rebuilding With almost 80 years of first hand experience of disaster recovery between them Ian Davis an architect and David Alexander a geographer draw substantially from first hand experiences in a variety of recovery situations in China Haiti Italy Japan New Zealand Pakistan the Philippines and the USA The volume is further enriched by two important and unique features 21 models of disaster recovery are presented seven of which were specifically developed for the book The second feature is a survey of expert opinion about the nature of effective disaster recovery the first of its kind More than 50 responses are provided in full along with an analysis that integrates them with the theories that underpin them By providing a framework and models for future study and applications Davis and Alexander seek both to advance the field and to provide a much needed reference work for decision makers With a broad perspective derived from the authors roles held as university professors researchers trainers consultants NGO directors and advisors to governments and UN agencies this comprehensive guide will be invaluable for practitioners and students of disaster management
