Cibse Guide B Heating:

Heating, Ventilating, Air Conditioning and Refrigeration Ken Butcher, 2005-01-01 Heating, Ventilating, Air Conditioning and Refrigeration, 2005 **A Guide to Energy Management in Buildings** Douglas Harris, 2012-06-25

Inefficient energy use in buildings is both increasingly expensive and unsustainable. Indeed the reduction of the energy consumption of existing buildings is as least as important as the design of new low energy buildings. Controlling energy use is one thing but it is important to assess or estimate it and to understand the range of interventions for reducing its use and the methods for assessing the cost effectiveness of these measures. This comprehensive guide clearly and concisely covers the various issues from a theoretical standpoint and provides practical worked examples where appropriate along with examples of how the calculations are carried out. Topics covered include where and how energy is used in buildings, energy audits, measuring and monitoring energy use, techniques for reducing energy use in buildings, legislative issues. It provides a template for instigating the energy management process within an organization as well as guidance on management issues such as employee motivation and gives practical details on how to carry it through. This book should appeal to building managers and facilities managers and also to students of energy management modules in FE and HE courses.

Heating Services in Buildings David E. Watkins, 2011-09-26. Water based heating systems are efficient, flexible, versatile and offer many advantages over other heating systems. These advantages: fast response, good controllability, efficient zonal heating and largely silent operation, all require that initial design, installation, commissioning and maintenance be carried out to a high standard by competent engineers. *Heating Services in Buildings* provides the reader with a detailed and thorough understanding of the principles and elements of heating buildings using modern water based heating systems. A key theme of the book is that there is little difference in the approach to the design and engineering between domestic and commercial installations. The author's detailed but highly practical approach to the subject ensures there is sufficient information for students from both a craft background and those with more academic backgrounds to understand the material. This approach is complemented by straightforward, easy to use diagrams. *Heating Services in Buildings* supports a range of educational courses including degree level building services engineering, NVQ Level 4 Higher Professional Diploma in Building Services Engineering, City Guilds supplementary heating course and the Heating Design and Installation Course accredited by the European Registration Scheme (ERS).
