The Internet and Political Protest in Autocracies Nils B. Weidmann, Espen Geelmuyden Rød, 2019 Eight years after the Arab Spring there is still much debate over the link between Internet technology and protest against authoritarian regimes While the debate has advanced beyond the simple question of whether the Internet is a tool of liberation or one of surveillance and propaganda theory and empirical data attesting to the circumstances under which technology benefits autocratic governments versus opposition activists is scarce In this book Nils B Weidmann and Espen Geelmuyden R d offer a broad theory about why and when digital technology is used for one end or another drawing on detailed empirical analyses of the relationship between the use of Internet technology and protest in

autocracies By leveraging new sub national data on political protest and Internet penetration they present analyses at the level of cities in more than 60 autocratic countries The book also introduces a new methodology for estimating Internet use developed in collaboration with computer scientists and drawing on large scale observations of Internet traffic at the local level Through this data the authors analyze political protest as a process that unfolds over time and space where the effect of Internet technology varies at different stages of protest They show that violent repression and government institutions affect whether Internet technology empowers autocrats or activists and that the effect of Internet technology on protest varies across different national environments

Meter,2014-05-09 Quantum networks build on entanglement and quantum measurement to achieve tasks that are beyond the reach of classical systems Using quantum effects we can detect the presence of eavesdroppers raise the sensitivity of scientific instruments such as telescopes or teleport quantum data from one location to another Long distance entanglement can be used to execute important tasks such as Byzantine agreement and leader election in fewer rounds of communication than classical systems improving the efficiency of operations that are critical in distributed systems

Essentials of Computer Organization and Architecture with Navigate Advantage Access Linda Null,2023-04-13 Essentials of Computer Organization and Architecture focuses on the function and design of the various components necessary to process information digitally This title presents computing systems as a series of layers taking a bottom up approach by starting with low level hardware and progressing to higher level software Its focus on real world examples and practical applications encourages students to develop a big picture understanding of how essential organization and architecture concepts are applied in the computing world In addition to direct correlation with the ACM IEEE guidelines for computer organization and architecture the text exposes readers to the inner workings of a modern digital computer through an integrated presentation of fundamental concepts and principles

CyberPhysical Systems Kostas Siozios,Dimitrios Soudris,Elias Kosmatopoulos,2022-09-01 As systems continue to evolve they rely less on human decision making and more on computational intelligence This trend in conjunction to the available technologies for providing advanced sensing measurement process control and communication lead towards the new field of Cyber Physical System CPS Cyber physical systems are expected to play a major role in the design and development of future engineering platforms with new capabilities that far exceed today s levels of autonomy functionality and usability Although these systems exhibit remarkable characteristics their design and implementation is a challenging issue as numerous heterogeneous components and services have to be appropriately modeled and simulated together The problem of designing efficient CPS becomes far more challenging in case the target system has to meet also real time constraints *CyberPhysical Systems Decision Making Mechanisms and Applications* describes essential theory recent research and large scale usecases that addresses urgent challenges in CPS architectures In particular it includes chapters on Decision making for large scale CPS Modeling of CPS with emphasis at the control mechanisms Hardware software implementation of the control mechanisms Fault tolerant and reliability issues for the control mechanisms Cyberphysical user cases that incorporate challenging decision making
