Dye-sensitized Solar Cells K. Kalyanasundaram, 2010-08-03 The dye-sensitized solar cell (DSC) is a photovoltaic converter that mimics natural photosynthesis. Like green plants and algae, it uses a molecular absorber (the dye) to harvest sunlight and generate electric charges. Dye-sensitized solar cells are poised to replace existing technologies in low-density solar energy applications, especially in contexts where mechanical robustness and light weight are required. This book offers the first comprehensive look at this promising technology and aims to provide a graduate-level text that brings together the fundamentals of DSC from three perspectives: materials, performance, and mechanistic aspects, as well as to serve as an advanced monograph that summarizes the key advances and lists the technical challenges remaining to be solved.
