Decisions With Multiple Objectives Preferences And Value Tradeoffs:

Decisions with Multiple Objectives Ralph L. Keeney, Howard Raiffa, 1993-07 This book describes how a confused decision maker who wishes to make a reasonable and responsible choice among alternatives can systematically probe their thoughts and feelings in order to make the critically important trade offs between incommensurable objectives *Decisions with Multiple Objectives* Ralph L. Keeney, Howard Raiffa, 1993-07-30 Many of the complex problems faced by decision makers involve multiple conflicting objectives This book describes how a confused decision maker who wishes to make a reasonable and responsible choice among alternatives can systematically probe his true feelings in order to make those critically important vexing trade offs between incommensurable objectives The theory is illustrated by many real concrete examples taken from a host of disciplinary settings The standard approach in decision theory or decision analysis specifies a simplified single objective like monetary return to maximise By generalising from the single objective case to the multiple objective case this book considerably widens the range of applicability of decision analysis **Decisions with Multiple Objectives** Ralph L. Multiple Criteria Decision Making Theory and Application G. Fandel, T. Gal, 2012-12-06 He considers a cone dominance problem given a preference cone IP and a set $n \times R$ of available or feasible alternatives the problem is to identify the non dominated elements of X The nonzero elements of IP are assumed to model the dominance structure of the problem so that $y \in X$ dominates $x \in X$ if $Y \times P$ for some nonzero $p \in S \cap IP$ Consequently $x \in X$ is nondominated if and only if $x \in n \times x \cap 1 \cap 1$ He will also refer to nondominated points as efficient points in X with respect to IP and we will let $EF(X, P)$ denote the set of such efficient points This cone dominance problem draws its roots from two separate but related origins The first of these is multi attribute decision making in which

the elements of the set X are endowed with various attributes each to be maximized or minimized
