WARNING

The independent ball joints must be adjusted on the balls through wear. They should be adjusted with the vehicle supported using the lifting bar B at that wheel end together on the highway, there is no tendency to wobble. Frangible use of one of the ball joints for steering resistance will cause the balls to wear their sockets, and to become out of adjustment one with the other. This should be corrected as soon as it becomes evident. Check regular steering weekly and also before putting a wheel.

Jack up both rear wheels and with the vehicle supported raise them approximately $\frac{1}{2}$ in. (12 mm). Put on the ball joints (not sufficient to "load" the ball in this position. At the front end of the lower ball, put under each foot plate, release the locknuts A, Fig. 5-15 and adjust each adjusting
