De Regulering Van Inferenties Door De Kennis Van De Lezer

Wim Simons

De Regulering Van Inferenties Door De Kennis Van De Lezer:

De regulering van inferenties door de kennis van de lezer Wim Simons, 1993 **Functional Literacy** Ludo Th Verhoeven, 1994-01-01 The purpose of the volume is to open up new perspectives in the study of literacy by bringing together current research findings from linguistics psychology sociology and anthropology The book divides into five parts The first part deals with theoretical questions related to the definition and the modeling of the construct of functional literacy The second part goes into the notion of literacy development Both societal and individual aspects of literacy development are taken into account In the next two parts the actual achievement of literacy in various regions of the world is dealt with In part 3 the focus is on attaining literacy in developing societies and in part 4 on attaining literacy in industrialized societies In the final part the question is raised how functional literacy can be promoted through education Starting from a cross cultural perspective the central issue is how standards of functional literacy can be established throughout the world **Language,**

Text, and Knowledge Lita Lundquist, Robert J. Jarvella, 2010-12-14 The series serves to propagate investigations into language usage especially with respect to computational support This includes all forms of text handling activity not only interlingual translations but also conversions carried out in response to different communicative tasks Among the major topics are problems of text transfer and the interplay between human and machine activities **Language**

Comprehension: A Biological Perspective Angela D. Friederici, 2012-12-06 Language comprehension and production is a uniquely human capability We know little about the evolution of language as a human trait possibly because our direct ancestors lived several million years ago This fact certainly impedes the desirable advances in the biological basis of any theory of language evolution Our knowledge about language as an existing species specific biological system however has advanced dramatically over the last two decades New experimental techniques have allowed the investigation of language and language use within the methodological framework of the natural sciences The present book provides an overview of the experimental research in the area of language comprehension in particular A biological perspective on language appears to be the common ground for all the contributors Their research view is based on the conviction that knowledge about the language system can be gained on the basis of empirical research guided by modifiable theories Each of the contributors reports and discusses the relevant work in hers or his specific field of research Each of the nine chapters in this book focuses on a different level or aspect of language comprehension thereby covering the level of input processes and word recognition the level of sentence processing as well as the level of text processing Aspects of structural representation and access to this representation are also discussed One chapter finally attempts to describe the neurobiological basis of the different aspects of the language comprehension process *Language Comprehension* Angela D. Friederici, 2012-12-06 The second edition of the book on language comprehension in honor of Pim Levelt's sixtieth birthday has been released before he turns sixty one Some things move faster than the years of age This seems to be especially true for advances in science Therefore the present

edition entails changes in some of the chapters and incorporates an update of the current literature I would like to thank all contributors for their cooperation in making a second edition possible such a short time after the completion of the first one

Angela D Friederici Leipzig November 23 1998 Preface to the first edition Language comprehension and production is a uniquely human capability We know little about the evolution of language as a human trait possibly because our direct ancestors lived several million years ago This fact certainly impedes the desirable advances in the biological basis of any theory of language evolution Our knowledge about language as an existing species specific biological system however has advanced dramatically over the last two decades New experimental techniques have allowed the investigation of language and language use within the methodological framework of the natural sciences The present book provides an overview of the experimental research in the area of language comprehension in particular
