Experiment and Natural Philosophy in Seventeenth-Century Tuscany Luciano Boschiero, 2007-09-04 The aim of this book is to explore and understand the activities undertaken by the Florentine Accademia del Cimento one of Europe's first scientific societies The Cimento operated for ten years between 1657 and 1667 and during that time performed many experiments and observations in physics and astronomy rivalling the achievements of the Royal Society of London and the Parisian Académie Royale des Sciences This book will attempt to sift through the available primary evidence as well as secondary accounts of the Cimento's activities in order to examine the intellectual concerns that the individual academicians acquired throughout their careers and that they pursued while carrying out and interpreting their experiments for the Cimento and the Tuscan Court Those interests will also shed some light on the ways in which the academicians performed and used experiments Inspired by Galileo's success with experiments and instruments during the first half of the seventeenth century the Cimento academicians developed an experimentalist approach to their natural inquiry that attempted to eliminate any dependence on theoretical presuppositions and preconceptions The group's purported aim was to rely solely on the senses to accumulate knowledge of nature This experimental philosophy framed the way in which historians have since viewed the Cimento's practices

Writing Science Markus Asper,2013-06-26 Scientific and technological texts have not played a significant role in modern literary criticism This applies to Classics too despite the fact that a large part of the field s extant texts deal with questions of medicine mathematics and natural philosophy Focusing mostly on medical and mathematical texts this collection aims at approaching ancient Greek science and its texts from the cross disciplinary perspective of authorship Among the questions addressed are What is a scientific author In what respect does scientific writing differ from literary writing How does the author present himself as an authoritative figure through his text What strategies of trust do these authors employ These and related questions cannot be discussed within the typical boundaries of modern academic disciplines thus most of the sixteen authors many of them leading experts in the fields of ancient science bring a comparative perspective to their subjects As a result the collection not only offers a new approach to this vast area of ancient literature thus effectively discovering new possibilities for literary criticism it also reflects on our current forms of scientific and scholarly written communication
