Politics Hasret Çomak, Burak Şakir Şeker, 2024-12-27 In today's world it is more crucial than ever to navigate the intricate and multifaceted challenges posed by climate change and chart a course toward a more sustainable future. The pressing necessity to address these issues has become a defining feature of our century, compelling nations and individuals alike to take decisive action. The paramount objectives for the 21st century are clear: mitigating the adverse consequences of climate change, protecting both national and international public health, and ensuring a sustainable and prosperous future for generations to come. These goals are not just aspirational but essential for the well-being of our planet and its inhabitants. This book provides a comprehensive exploration of climate change, highlighting the immense power of scientific research and the importance of disseminating this knowledge widely. Through its chapters, the book offers an in-depth examination of various facets of climate change, presenting a synthesis of research findings, theoretical frameworks, and practical strategies. By presenting a multifaceted examination of climate change, this book aims to inspire action and foster a deeper understanding of the complexities involved. It is a call to action for individuals, communities, and nations to come together, leveraging the power of knowledge, innovation, and cooperation to build a more sustainable and resilient future. Together, through concerted efforts and a shared commitment to sustainability, we can navigate the complexities of climate change and pave the way for a brighter, more sustainable tomorrow.

Contemplating Climate Change Stephen M. Dark, 2018-07-11 Global climate change policy has failed us all, but what is the reasoning that underlies this failure? Why are some people more disposed to reflect on confounding issues like climate change, recognise the danger, seek a solution, and act accordingly more than others? This book is concerned with how we think and act in response to climate change. In particular, faced with deep uncertainty and the multifaceted complexities that characterise the climate change conundrum, how do the various actors and institutions involved in the policymaking process make decisions that both aid and impede in the design and implementation of climate change policy? This book focuses on how these actors and institutions frame and use the knowledge available under conditions of competing ideologies and interests and synthesise it to form often disparate mental models or worldviews that inspire them to become firm advocates of meaningful climate change action or indeed sceptics that continue to downplay the threat and hence the need for urgency. By exploring how we think about climate change and the disparate mental models we hold as a result, this book explores why humankind has thus far failed in its endeavours to solve the climate change problem. This book will be of great interest to students and scholars of climate change, environmental policy, and environmental psychology.

The Global Carbon Cycle and Climate Change David E. Reichle, 2019-11-12 The Global Carbon Cycle and Climate Change examines the global carbon cycle and the energy balance of the biosphere, following carbon and energy through increasingly complex levels of metabolism from cells to ecosystems. Utilizing scientific explanations, analyses of ecosystem functions, extensive references, and cutting-edge examples of energy flow in ecosystems, it is an essential resource to aid in understanding the scientific basis of the role played by ecological systems in climate change. This book addresses the

need to understand the global carbon cycle and the interrelationships among the disciplines of biology chemistry and physics in a holistic perspective The Global Carbon Cycle and Climate Change is a compendium of easily accessible technical information that provides a clear understanding of energy flow ecosystem dynamics the biosphere and climate change Dr Reichle brings over four decades of research on the structure and function of forest ecosystems to bear on the existential issue of our time climate change Using a comprehensive review of carbon biogeochemistry as scaled from the physiology of organisms to landscape processes his analysis provides an integrated discussion of how diverse processes at varying time and spatial scales function The work speaks to several audiences Too often students study their courses in a vacuum without necessarily understanding the relationships that transcend from the cellular process to organism to biosphere levels and exist in a dynamic atmosphere with its own processes and spatial dimensions This book provides the template whereupon students can be guided to see how the pieces fit together The book is self contained but lends itself to be amplified upon by a student or professor The same intellectual quest would also apply for the lay reader who seeks a broad understanding W F Harris Provides clear explanations examples and data for understanding fossil fuel emissions affecting atmospheric CO₂ levels and climate change and the role played by ecosystems in the global cycle of energy and carbon Presents a comprehensive factually based synthesis of the global cycle of carbon in the biosphere and the underlying scientific bases Includes clear illustrations of environmental processes Climate Obstruction across Europe Robert J. Brulle, J. Timmons Roberts, Miranda C. Spencer, 2024-07-16 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations Understanding climate obstruction is foundational to advancing effective action on the global climate crisis Starting in the late 1980s a broad range of actors including corporations and trade associations acting in coordination with conservative think tanks foundations and public relations firms mounted a long term effort to oppose action to mitigate the greenhouse gas emissions responsible for climate change This is the first book to document the development and nature of these activities across Europe Leading teams of experts examine case studies of eleven nations and the European Union Each team documents the historic development of climate obstruction in the country the principal organizations involved in these efforts the strategies and tactics utilized and the nature of the arguments made to slow or stop climate action Noting significant differences between countries the book concludes with ten lessons on climate obstruction across Europe that emerged from the studies Future research is suggested to aid in better understanding the development of intentional barriers to action on climate change in Europe *The Kyoto Post-COVID Manifesto For Global Economics* Stephen Hill, Tadashi Yagi, Stomu Yamashita, 2022-05-05 This book The Kyoto Post COVID Manifesto for Global Economics KM PC is a sequel to our 2018 book The Kyoto Manifesto for Global Economics KM I 2018 It further exposes the failures of a global economic regime that based on self interest has led to the enormously unequal and fragmented society of

today and our decreased ability to respond and recover from the critical worldwide consequences of such a regime over time notably climate change At stake is our very survival beyond the twenty first century The fundamental tenet of this book is that our power to heal our currently fractured society lies in the depth of our humanity in our shared human spirit and spirituality What is sacred or of imperishable supreme value is what we can be as a human race empowered fulfilled individuals living in harmony deeply sharing and caring for one another and the environment that sustains us across our distinct cultures and worlds in which we live Thus the norms in our economic relations do not have to be those of self interest that separates us the ever watchful distrust represented by the deal and immediate economic advantage for me Instead we can build an economic frame for our society based on mindfulness care mutual human benefit and trust on our shared humanity Our argument was complete and we were ready to publish But then suddenly from the dawning of 2020 everything changed COVID 19 invaded and the world as we knew it simply stopped No one saw it coming As authors we waited to watch and seek to understand The result is that the book captures the COVID trauma and against the fractures based on self interest already visible in today s society assesses the impact of COVID 19 now and for the future Focusing on a humanity based economics is even more important now and this book shows why Chapter 15 is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)
