concern the human race at the present time Ecological Restoration and Management of Longleaf Pine Forests L. Katherine Kirkman, Steven B. Jack, 2017-09-27 Ecological Restoration and Management of Longleaf Pine Forests is a timely synthesis of the current understanding of the natural dynamics and processes in longleaf pine ecosystems This book beautifully illustrates how incorporation of basic ecosystem knowledge and an understanding of socioeconomic realities shed new light on established paradigms and their application for restoration and management Unique for its holistic ecological focus rather than a more traditional silvicultural approach the book highlights the importance of multi faceted actions that robustly integrate forest and wildlife conservation at landscape scales and merge ecological with socioeconomic objectives for effective conservation of the longleaf pine ecosystem **Geology and Landscape Evolution** Joseph A. DiPietro, 2018-04-16 Geology and Landscape Evolution General Principles Applied to the United States Second Edition is an accessible text that balances interdisciplinary theory and applications within the physical geography geology geomorphology and climatology of the United States The vast diversity of terrain and landscape across the United States makes this an ideal tool for geoscientists worldwide who research the country s geological and landscape evolution The book provides an explanation of how landscape forms how it evolves and why it looks the way it does This new edition is fully updated with greater detail throughout and additional figures maps drawings and photographs Rather than limiting the coverage specifically to tectonics or to the origin and evolution of rocks with little regard for the actual landscape beyond general desert river and glacial features this book concentrates specifically on the origin of the landscape itself with specific and exhaustive reference to examples from across the United States The book begins with a discussion of how rock type and rock structure combine with tectonic activity climate isostasy and sea level change to produce landscape and then explores predicting how landscape will evolve The book goes on to apply those concepts to specific examples throughout the United States making it a valuable resource for understanding theoretical geological concepts through a practical lens Presents the complexities of physical geography geology geomorphology and climatology of the United States through an interdisciplinary highly accessible approach Offers hundreds of full color figures maps and photographs that capture the systematic interaction of land rock rivers glaciers global wind patterns and climate including Google Earth images Provides a thorough assessment of the logic rationale and tools required to understand how to interpret landscape and the geological history of the Earth Features exercises that conclude each chapter aiding in the retention of key concepts Updated with greater detail throughout and additional figures maps drawings and photographs Includes additional subheadings so that material is easier to find and digest Includes an all new chapter on glaciation and expanded exercises using Google Earth images to enhance understanding **Climate Forcing of Geological Hazards** Bill McGuire, Mark A. Maslin, 2012-12-10 Climate Forcing of Geological Hazards provides a valuable new insight into how climate change is able to influence modulate and trigger geological and geomorphological phenomena such as earthquakes tsunamis volcanic eruptions and landslides ultimately

increasing the risk of natural hazards in a warmer world Taken together the chapters build a panorama of a field of research that is only now becoming recognized as important in the context of the likely impacts and implications of anthropogenic climate change The observations analyses and interpretations presented in the volume reinforce the idea that a changing climate does not simply involve the atmosphere and hydrosphere but also elicits potentially hazardous responses from the solid Earth or geosphere *Climate Forcing of Geological Hazards* is targeted particularly at academics graduate students and professionals with an interest in environmental change and natural hazards As such we are hopeful that it will encourage further investigation of those mechanisms by which contemporary climate change may drive potentially hazardous geological and geomorphological activity and of the future ramifications for society and economy

Sedimentary Basins Gerhard Einsele, 2013-06-29 The modern geological sciences are characterized by extraordinarily rapid progress as well as by the development and application of numerous new and refined methods most of them handling an enormous amount of data available from all the continents and oceans Given this state of affairs it seems inevitable that many students and professionals tend to become experts in relatively narrow fields and thereby are in danger of losing a broad view of current knowledge The abundance of new books and symposium volumes testifies to this trend toward specialization However many geologic processes are complex and result from the interaction of many seemingly unrelated individual factors This signifies that we still need generalists who have the broad overview and are able to evaluate the great variety of factors and processes controlling a geologic system such as a sedimentary basin In addition this also means that cooperation with other disciplines in the natural sciences and engineering is increasingly important Modern text books providing this broad overview of the earth sciences are rare

Geomorphology and Natural Hazards Timothy R. Davies, Oliver Korup, John J. Clague, 2021-03-30 Natural disasters are occasional intense events that disturb Earth's surface but their impact can be felt long after Hazard events such as earthquakes volcanos drought and storms can trigger a catastrophic reshaping of the landscape through the erosion transport and deposition of different kinds of materials *Geomorphology and Natural Hazards Understanding Landscape Change for Disaster Mitigation* is a graduate level textbook that explores the natural hazards resulting from landscape change and shows how an Earth science perspective can inform hazard mitigation and disaster impact reduction Volume highlights include Definitions of hazards risks and disasters Impact of different natural hazards on Earth surface processes Geomorphologic insights for hazard assessment and risk mitigation Models for predicting natural hazards How human activities have altered natural hazards Complementarity of geomorphology and engineering to manage threats
