Breeders is essential for academics and researchers working in genetics breeding and genomics and as a supplement for coursework in quantitative genetics and plant breeding **Geopolitics and the Green Revolution** John H.

Perkins,1997-12-14 During the last 100 years the worldwide yields of cereal grains such as wheat and rice have increased dramatically Since the 1950s developments in plant breeding science have been heralded as a Green Revolution in modern agriculture But what factors have enabled and promoted these technical changes And what are the implications for the future of agriculture This new book uses a framework of political ecology and environmental history to explore the Green Revolution s emergence during the 20th century in the United States Mexico India and Britain It argues that the national security planning efforts of each nation were the most important forces promoting the development and spread of the Green Revolution when viewed in the larger scheme this period can be seen as the latest chapter in the long history of wheat use among humans which dates back to the neolithic revolution Efforts to reform agriculture and mitigate some of the harsh environmental and social consequences of the Green Revolution have generally been insensitive to the deeply embedded nature of high yielding agriculture in human ecology and political affairs This important insight challenges those involved in agriculture reform to make productivity both sustainable and adequate for a growing human population Plant Breeding and Cultivar Development D. P. Singh,A. K. Singh,A. Singh,2021-01-21 Plant Breeding and Cultivar Development features an optimal balance between classical and modern tools and techniques related to plant breeding Written for a global audience and based on the extensive international experience of the authors the book features pertinent examples from major and minor world crops Advanced data analytics machine learning phenomics and artificial intelligence are explored in the book s 28 chapters that cover classical and modern plant breeding By presenting these advancements in specific detail private and public sector breeding programs will learn about new effective and efficient implementation The insights are clear enough that non plant breeding majoring students will find it useful to learn about the subject while advanced level students and researchers and practitioners will find practical examples that help them implement their work Bridges the gap between conventional breeding practices and state of the art technologies Provides real world case studies of a wide range of plant breeding techniques and practices Combines insights from genetics genomics breeding science statistics computer science and engineering for crop improvement and cultivar development The Classification of Flowering Plants Alfred Barton Rendle,1930 Horticultural Plant Breeding Thomas J. Orton,2019-11-21 Horticultural Plant Breeding is a complete and comprehensive resource for the development of new cultivars or clones of horticultural crops It covers the basic theories that underpin plant breeding and applies Mendelian quantitative and population inheritance practices in smaller populations where the individual plant has high value Specific traditional breeding methods are also covered with an emphasis on how these methods are adapted for horticultural species In addition the integration of biotechnologies with traditional breeding methodologies is explored with an emphasis on specific applications for fruits vegetables and ornamental crop species

Presented in focused sections Horticultural Plant Breeding addresses historical perspectives and context and genetics as a critical foundation of plant breeding It highlights treatments of the various components of breeding programs such as breeding objectives germplasm population engineering mating systems enhanced selection methods established breeding methods applicable to inbreeding and outcrossing situations and post breeding activities Provides a complete and comprehensive resource for those involved in the development of new cultivars or clones of horticultural crops Guides readers to the most appropriate breeding strategy including potential integration of traditional and biotechnology strategies that will best achieve a cost effective outcome Will include access to 20 narrated slide sets to facilitate additional understanding
