

Functional Description, continued.

CATTRON® MK controllers are equipped with an internal antenna and the typical operating (transmitter) range is in excess of 500 feet (160+ meters). It should be understood that operating range varies with environmental conditions. Should the transmitter go out of operating range, all motions will cease.

As previously mentioned, operational security is maximized by the need to use a stainless steel electronic i-Key for controller operation. However, there is an additional and very significant operational advantage of the CATTRON® i-Key concept. It is that individual system address, operating frequency and keypad configuration may be permanently stored in the i-Key, depending on the type of MK controller supplied. Therefore, CATTRON® MK series controllers belonging to the same family at a user location can be identical - only the i-Keys are different. To simplify, each i-Key is color coded and labeled for an individual control system family, thus, any CATTRON® MK controller will run any CATTRON® receiver/decoder belonging to the same family as long as the correct i-Key is used. As the result, this unique operating concept reduces the need for specific spare remote controllers. Our unique family of MK Series controllers is identified on the next page.

All CATTRON® MK series controllers are powered by disposable 3-Volt alkaline or re-chargeable Ni-Cad battery packs. In normal operation, a green LED 'flashes' with each function command message and a 'beep' is sounded when a key is pressed. When the battery voltage becomes low, a separate yellow LED flashes, alerting the operator that the battery pack needs to be replaced or re-charged soon. Battery packs are easily and quickly replaced without the need for tools by turning two knurled thumbscrews and removing the battery cover-plate located within the confines of the armored rubber bottom end-cap. The battery pack makes positive contact without snaps or plugs and has no wires to break; simply drop it in, and replace the battery cover-plate.

Ni-Cad battery packs can be re-charged 'in-situ' and do not need to be removed from the controller housing. To enable such battery charging to be carried out, an optional 'standard rate' (10-hour) battery charger is available for all CATTRON® MK series controllers. One end of this charger is connected to a standard 120VAC outlet, the other plugs into a covered socket located on the curved underside of the controller. A 'rapid rate' (1-hour) battery charger is available on request.

A belt loop strap is available for all CATTRON® MK series controllers. This is quickly and simply installed to a 'D'-ring located on the curved underside of the controller. Also, an optional shoulder carrying strap is available on request.
