

Earth Systems Interacting

Critical Thinking Activity

Scientists break down Earth's major systems into four; the geosphere, hydrosphere, atmosphere, and biosphere. These systems interact in multiple ways to affect Earth's surface materials and processes. In this activity, choose the systems that are working together to create the following phenomenon.

A mountain range blocks rainfall from reaching an area (rain shadow), making it a dry, desert biome.

The ocean supports many ecosystems from coral reefs to tide pools.

A sudden rainstorm in the desert can cause flooding and severe erosion, changing the landscape.

Volcanic vents in the ocean create habitats for creatures that live in or near the intense heat.

The troposphere is where evaporating water from the ocean forms clouds and precipitation.

Wave action from strong winds causes the coastline to erode.

Warming of the oceans with climate change may be causing the increased violence in storms.

Daily rain and equator warmth creates the perfect weather for the Amazon Rainforest.

Winds sweep across the deserts raising giant sandstorms that change the landscape.

G = geosphere

H = hydrosphere

A = atmosphere

B = biosphere

practices middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science developed by the National Science Resources Center (NSRC) is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area: Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type: core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved, and of what students can be expected to learn; a list of accompanying materials; a reading level; and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs; chapters on books about science and teaching; directories and guides to science trade books and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed, and the only guide of its kind, Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Earth Science Steven I. Dutch, James Stewart Monroe, Joseph M. Moran, 1998. One of the few texts to integrate earth systems approach with impact of humans on the planet, this volume focuses on modern science and how it works. This approach gives students the tools they need for critical thinking, problem solving, and inquiry into the study of geology, oceanography, and astronomy. With everyday observations and examples, this text is highly readable and engaging.

Investigating Natural Disasters Through Children's Literature Anthony D. Fredericks, 2001-04-15. Natural disasters enthrall with their potency, might, and devastation. Tap into students' inherent awe of storms, volcanic eruptions, hurricanes, earthquakes, tornadoes, floods, avalanches, landslides, and tsunamis to open their minds to the wonders and power of the natural world. Using quality children's literature as a springboard to learning, this guide extends the understanding of science concepts through short activities, longer projects, and

adventures This participatory approach keeps the focus on the processes of science and promotes a personal response to learning Students can use the literature and activities not just to better understand the forces of nature but to grasp the implications of that potency on the lives of people near and far Grades 3 6
