Environmental Design Manual P. Petherbridge,N. O. Milbank,J. Harrington-Lynn,1988 This manual presents a graphical method of assessing the effect of the window size and type the kind of construction and the rate of ventilation on summertime comfort conditions and daylighting in top lit offices with one external wall The method is for use early in the design procedure

Building Energy Management Systems Geoff Levermore,2013-07-04 Energy management systems are used to monitor building temperature inside and outside buildings and control the boilers and coolers Energy efficiency is a major cost issue for commerce and industry and of growing importance on university syllabuses Fully revised and updated this text considers new developments in the control of low energy and HVAC systems and contains two new chapters Written for practising engineers essential for control engineers and energy managers in addition to being essential reading for under postgraduate courses in building services and environmental engineering

Thermal Comfort Assessment of Buildings Salvatore Carlucci,2013-05-24 A number of metrics for assessing human thermal response to climatic conditions have been proposed in scientific literature over the last decades They aim at describing human thermal perception of the thermal environment to which an individual or a group of people is exposed More recently a new type of discomfort index has been proposed for

describing in a synthetic way long term phenomena Starting from a systematic review of a number of long term global discomfort indices they are then contrasted and compared on a reference case study in order to identify their similarities and differences and strengths and weaknesses Based on this analysis a new short term local discomfort index is proposed for the American Adaptive comfort model Finally a new and reliable long term general discomfort index is presented It is delivered in three versions and each of them is suitable to be respectively coupled with the Fanger the European Adaptive and the American Adaptive comfort models

Building Control Systems, 2000 Beginning with an overview of the benefits of the modern building control system the authors go on to describe the different controls and their applications and include advice on their set up and tuning for stable operation

Introduction to Architectural Science Steven Szokolay, 2014-04-11 Now in its third edition this book provides the ideal and only reference to the physical basis of architectural design Fully updated and expanded throughout the book provides the data required for architects to design buildings that will maintain the users comfort in a variety of conditions with minimal reliance on energy intensive methods like air conditioning This is not a how to book but answers the question why It equips the reader with the tools to realize the full potential of the good intentions of sustainable bioclimatic design All sections have been revised and updated for this third edition including all the most relevant developments affecting heat light and sound controls The book responds to the need of understanding beyond rules of thumb

Energy: Management, Supply and Conservation Clive Beggs, 2012-06-25 With more and more concern being expressed over the Earth's dwindling energy resources as well as rising pollution levels the subject of energy management and conservation is becoming increasingly important Over half of all energy consumed is used in buildings so effective management of buildings whether commercial or domestic is vital This book is a comprehensive text dealing with the theory and practice of the supply of energy to consumers energy management and auditing and energy saving technology It will be a core text on courses on energy management and building services as well as updating professionals in the building sector

Adaptive Thermal Comfort: Principles and Practice Fergus Nicol, 2012-03-15 The fundamental function of buildings is to provide safe and healthy shelter For the fortunate they also provide comfort and delight In the twentieth century comfort became a product produced by machines and run on cheap energy In a world where fossil fuels are becoming ever scarcer and more expensive and the climate more extreme the challenge of designing comfortable buildings today requires a new approach This timely book is the first in a trilogy from leaders in the field which will provide just that It explains in a clear and comprehensible manner how we stay comfortable by using our bodies minds buildings and their systems to adapt to indoor and outdoor conditions which change with the weather and the climate The book is in two sections The first introduces the principles on which the theory of adaptive thermal comfort is based The second explains how to use field studies to measure thermal comfort in practice and to analyze the data gathered Architects have gradually passed responsibility for building performance to service engineers who are largely trained to see comfort as the product designed

using simplistic comfort models The result has contributed to a shift to buildings that use ever more energy A growing international consensus now calls for low energy buildings This means designers must first produce robust passive structures that provide occupants with many opportunities to make changes to suit their environmental needs Ventilation using free natural energy should be preferred and mechanical conditioning only used when the climate demands it This book outlines the theory of adaptive thermal comfort that is essential to understand and inform such building designs This book should be required reading for all students teachers and practitioners of architecture building engineering and management for all who have a role in producing and occupying twenty first century adaptive low carbon comfortable buildings
