Complex Adoption And Assisted Reproductive Technology A Developmental Approach To Clinical Practice:

Complex Adoption and Assisted Reproductive Technology, 2001-03-07 New pathways to parenthood are being traveled by growing numbers of couples and single adults including many who face medical and social barriers to having children From a psychological standpoint families formed by complex adoption and assisted reproductive technology ART are first and foremost just that families Yet they also face a unique array of issues and challenges that may be clarified and resolved in the therapeutic setting This much needed book provides a deeper understanding of the ways that complex adoption and ART shape the life experience of children and parents identifying important areas and methods for assessment and treatment Combining developmental and ecological research with in depth case material the book establishes an integrative framework for clinical practice The authors draw upon knowledge and skills gained from working in a variety of new family contexts In the area of adoption many new options have evolved that differ from traditional practices of adoption at birth Thousands of older children in foster and institutional care in the United States and abroad are awaiting permanent placements Open adoption kinship adoption and transracial adoption are also transforming family life as is the use of ART which raises significant issues of family identity and family process The book explores such key themes as the significance of early experience the capacity to recover from exposure to trauma the impact of heredity and the difference that environment can make and the centrality of primary attachment relationships Also discussed are the impact of bias and other issues affecting families of difference including lesbian and gay families Concluding chapters consider promising future directions for training and research This is an important resource for social workers family therapists clinical psychologists psychiatrists and other professionals working with children and families as well as researchers and students in these fields It will serve as a text in advanced undergraduate and graduate level courses

Understanding Adoption Kathleen Hushion, Susan B. Sherman, Diana Siskind, 2006 Adoption is a transformational process bringing parenthood to those who long for but cannot bear children and giving stranded children home family and their place in the world But every adoption is preceded and followed by its story and when these stories are told in the offices of psychotherapists we begin to understand the impact of adoption in all its complexity We learn from parents how their quest to have and raise a child has played out in real life and what shadows might have fallen between the dream and the reality And we learn from the children the many ways that being adopted shaped their development their sense of identity what went wrong along the way and how we may help Clinical work with parents and children as well as with adults who were adopted is the focus of Understanding Adoption Because adoption has become widely practiced accepted and accessible and because it has greatly changed the composition of families it is a timely subject for study The authors of this book undertake exploration of this important terrain of loss and connection and of the fragility and resilience of human bonds

Social Work Practice with Children, Fourth Edition Nancy Boyd Webb, 2019-01-14 Revised edition of the author's Social work practice with children c2011 **Neurobiology for Clinical Social Work: Theory and Practice (Norton Series on Interpersonal Neurobiology)** Jeffrey S. Applegate, Janet R. Shapiro, 2005-08-17 The last fifteen years have produced an explosion of research on the neurobiology of attachment This research which explores the ways in which affect regulation play key roles in determining the structure and function of the developing brain and mind has led to a revolution in the way that parent child relationships are viewed Although these insights have informed psychiatry as well as cognitive and psychoanalytic psychology their application to social work practice education and research has been lacking Here for the first time ever social work educators Jeffrey Applegate and Janet Shapiro demystify neurobiology and present it anew with the social work audience specifically in mind Social workers by virtue of their work with at risk children and families occupy a unique position from which to employ this new research in prevention and intervention This lack of education about neurobiology has unfortunately fostered misconceptions among social workers that these theories are too academic and thus irrelevant to clinical practice Neurobiology for Clinical Social Work corrects this misconception and introduces social workers to the powerful and practical ideas that are coming out of neurobiological research The research summarized here offers new insights about the crucial role that relationships play in human development and in professional helping efforts To set the stage for this inquiry the authors introduce fundamentals of brain structure development and functioning in the first parts of the book This introduction is intended as a primer and proceeds from the assumption that many readers are relatively unfamiliar with the field of brain science Building on this foundation the authors go on to describe the manner in which memory and affect regulation are neuropsychological processes The next chapters of the book delve into the concepts of attachment Specifically the authors are concerned with how precursors to attachment evolve during the earliest months of an infant's life and how various attachment classifications secure insecure disorganized lead to affect regulation the ability of

a child to regulate emotion Throughout the book these concepts are discussed in the context of what social workers face when trying to find explanatory structures for the ways in which early childhood experiences affect later life Later chapters turn even more directly toward practice Using case examples including adolescent parents and their children children with a depressed parent and children of substance abusing parents Applegate and Shapiro show clinicians how to make use of neurobiological concepts in designing treatment plans and interventions One chapter contains three extended case examples with commentary representing the three most common intervention models taught in schools of social work psychodynamic cognitive behavioral and systemic Various settings such as community mental health family service agencies and child welfare are also discussed In order to be effective and meet the complex challenges of the twenty first century social work professionals must join with their colleagues in other disciplines in coordinated efforts to integrate and apply newly emerging knowledge toward the enhancement of human well being Neurobiology for Clinical Social Work is a great place to start this process of integration and learning

Experience and Development Kathleen McCartney, Richard A. Weinberg, 2011-02-25 This volume reflects the strong influence that Sandra Wood Scarr's scholarship has had on what we know about experience and development via the lens of the psychological sciences especially the fields of developmental psychology behavior genetics early education and child care
