It's a Nonlinear World Richard H. Enns, 2010-10-14 Drawing examples from mathematics physics chemistry biology engineering economics medicine politics and sports this book illustrates how nonlinear dynamics plays a vital role in our world Examples cover a wide range from the spread and possible control of communicable diseases to the lack of predictability in long range weather forecasting to competition between political groups and nations After an introductory chapter that explores what it means to be nonlinear the book covers the mathematical concepts such as limit cycles fractals

chaos bifurcations and solitons that will be applied throughout the book Numerous computer simulations and exercises allow students to explore topics in greater depth using the Maple computer algebra system The mathematical level of the text assumes prior exposure to ordinary differential equations and familiarity with the wave and diffusion equations No prior knowledge of Maple is assumed The book may be used at the undergraduate or graduate level to prepare science and engineering students for problems in the real world or for self study by practicing scientists and engineers Computer Algebra Recipes for Mathematical Physics. (+ CD-ROM) Richard H. Enns, 2005 *Solving Nonlinear Partial Differential Equations with Maple and Mathematica* Inna Shingareva, Carlos Lizárraga-Celaya, 2011-07-24 The emphasis of the book is given in how to construct different types of solutions exact approximate analytical numerical graphical of numerous nonlinear PDEs correctly easily and quickly The reader can learn a wide variety of techniques and solve numerous nonlinear PDEs included and many other differential equations simplifying and transforming the equations and solutions arbitrary functions and parameters presented in the book Numerous comparisons and relationships between various types of solutions different methods and approaches are provided the results obtained in Maple and Mathematica facilitates a deeper understanding of the subject Among a big number of CAS we choose the two systems Maple and Mathematica that are used worldwide by students research mathematicians scientists and engineers As in the our previous books we propose the idea to use in parallel both systems Maple and Mathematica since in many research problems frequently it is required to compare independent results obtained by using different computer algebra systems Maple and or Mathematica at all stages of the solution process One of the main points related to CAS is based on the implementation of a whole solution method e g starting from an analytical derivation of exact governing equations constructing discretizations and analytical formulas of a numerical method performing numerical procedure obtaining various visualizations and comparing the numerical solution obtained with other types of solutions considered in the book e g with asymptotic solution
