GREAT LAKES WATERFOWL

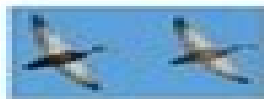

There are more than 150 species of ducks in the world, many of which inhabit the Great Lakes and St. Lawrence. Each species of duck has physical traits setting it apart from others, called identifying characteristics. These characteristics help people identify the ducks themselves.

WHAT MAKES A DUCK A DUCK?
The appearance of a duck can also reveal much about it. The shape of a duck's bill, for example, is very important. The shape of a duck's bill is related to what it eats. For example, a duck with a long, straight bill is likely a dabbling duck, while a duck with a long, curved bill is likely a diving duck.

In the Great Lakes region, ducks are often identified not only by their physical features, but also by their behavior. Some species of ducks are migratory, while others are not. Some ducks are also known for their distinctive calls.
