Completeness And Reduction In Algebraic Complexity Theory Algorithms And Computation In Mathematics:

Completeness and Reduction in Algebraic Complexity Theory Peter Bürgisser, 2000-06-21 This is a thorough and comprehensive treatment of the theory of NP completeness in the framework of algebraic complexity theory Coverage includes Valiant's algebraic theory of NP completeness interrelations with the classical theory as well as the Blum Shub Smale model of computation questions of structural complexity fast evaluation of representations of general linear groups and complexity of permanents *Completeness and Reduction in Algebraic Complexity Theory* Peter Bürgisser, 2013-03-14 One of the most important and successful theories in computational complexity is that of NP completeness This discrete theory is based on the Turing machine model and achieves a classification of discrete computational problems according to their algorithmic difficulty Turing machines formalize algorithms which operate on finite strings of symbols over a finite alphabet By contrast in algebraic models of computation the basic computational step is an arithmetic operation or comparison of elements of a fixed field for instance of real numbers Hereby one assumes exact arithmetic In 1989 Blum Shub and Smale [2] combined existing algebraic models of computation with the concept of uniformity and developed a theory of NP completeness over the reals BSS model Their paper created a renewed interest in the field of algebraic complexity and initiated new research directions The ultimate goal of the BSS model and its future extensions is to unite classical discrete complexity theory with numerical analysis and thus to provide a deeper foundation of scientific computation of [1] [10] Already ten years before the BSS paper Valiant [10] [11] had proposed an analogue of the theory of NP completeness in an entirely algebraic framework in connection with his famous hardness result for the permanent [10] While the part of his theory based on the Turing approach P-completeness is now standard and well known among the theoretical computer science community his algebraic completeness result for the permanents received much less attention

Algorithms and Computation Toshihide Ibaraki, Naoki Katoh, Hirotaka Ono, 2003-12-03 This book constitutes the refereed proceedings of the 14th International Symposium on Algorithms and Computation ISAAC 2003 held in Kyoto Japan in December 2003 The 73 revised full papers presented were carefully reviewed and selected from 207 submissions The papers are organized in topical sections on computational geometry graph and combinatorial algorithms computational complexity quantum computing combinatorial optimization scheduling computational biology distributed and parallel algorithms data structures combinatorial and network optimization computational complexity and cryptography game theory and randomized algorithms and algebraic and arithmetic computation *Recent Advances in Real Complexity and Computation* Luis M. Pardo, Jose Luis Montaña, 2014-11-12 This volume is composed of six contributions derived from the lectures given during the UIMP RSME Lluís Santalo Summer School on Recent Advances in Real Complexity and Computation held July 16-20 2012 in Santander Spain The goal of this Summer School was to present some of the recent advances on Smale's 17th Problem Can a zero of n complex polynomial equations in n unknowns be found approximately on the average in polynomial time with a

uniform algorithm These papers cover several aspects of this problem from numerical to symbolic methods in polynomial equation solving computational complexity aspects both worst and average cases and both upper and lower complexity bounds as well as aspects of the underlying geometry of the problem Some of the contributions also deal with either real or multiple solutions solving
