Foundations of Complex Analysis in Non Locally Convex Spaces A. Bayoumi, 2003-11-11 All the existing books in Infinite Dimensional Complex Analysis focus on the problems of locally convex spaces However the theory without convexity condition is covered for the first time in this book This shows that we are really working with a new important and interesting field Theory of functions and nonlinear analysis problems are widespread in the mathematical modeling of real world systems in a very broad range of applications During the past three decades many new results from the author have helped to solve multiextreme problems arising from important situations non convex and non linear cases in function theory Foundations of Complex Analysis in Non Locally Convex Spaces is a comprehensive book that covers the fundamental theorems in Complex and Functional Analysis and presents much new material The book includes generalized new forms of Hahn Banach Theorem Multilinear maps theory of polynomials Fixed Point Theorems p extreme points and applications in Operations Research Krein Milman Theorem Quasi differential Calculus Lagrange Mean Value Theorems Taylor series Quasi holomorphic and Quasi analytic maps Quasi Analytic continuations Fundamental Theorem of Calculus Bolzano s Theorem Mean Value Theorem for Definite Integral Bounding and weakly bounding limited sets Holomorphic Completions and Levi problem Each chapter contains illustrative examples to help the student and researcher to enhance his knowledge of theory of functions The new concept of Quasi differentiability introduced by the author represents the backbone of the theory of Holomorphy for non locally convex spaces In fact it is different but much stronger than the Frechet one The book is intended not only for Post Graduate M Sc The book contains new generalized versions of i Fundamental Theorem of Calculus Lagrange Mean Value Theorem in real and complex cases Hahn Banach Theorems Bolzano Theorem Krein Milman Theorem Mean value Theorem for Definite Integral and many others ii Fixed Point Theorems of Bruower Schauder and Kakutani s bull The book contains some applications in Operations research and non convex analysis as a consequence of the new concept p Extreme points given by the author bull The book contains a complete theory for Taylor Series representations of the different types of holomorphic maps in F spaces without convexity conditions bull The book contains a general new concept of differentiability stronger than the Frechet one This implies a new Differentiable Calculus called Quasi differential or Bayoumi differential Calculus It is due to the author s discovery in 1995 bull The book contains the theory of polynomials and Banach Stienhaus theorem in non convex spaces **Differential Calculus and Holomorphy** J.F. Colombeau, 2011-08-18 Differential Calculus and Holomorphy *Complex analysis in locally convex spaces* Seán Dineen, 1981 Complex Analysis on Infinite Dimensional Spaces Sean Dineen, 2012-12-06 Infinite dimensional holomorphy is the study of holomorphic or analytic functions over complex topological vector spaces The terms in this description are easily stated and explained and allow the subject to project itself initially and innocently as a compact theory with well defined boundaries However a comprehensive

study would include delving into and interacting with not only the obvious topics of topology several complex variables theory and functional analysis but also differential geometry Jordan algebras Lie groups operator theory logic differential equations and fixed point theory This diversity leads to a dynamic synthesis of ideas and to an appreciation of a remarkable feature of mathematics its unity Unity requires synthesis while synthesis leads to unity It is necessary to stand back every so often to take an overall look at one's subject and ask How has it developed over the last ten twenty fifty years Where is it going What am I doing I was asking these questions during the spring of 1993 as I prepared a short course to be given at Universidade Federal do Rio de Janeiro during the following July The abundance of suitable material made the selection of topics difficult For some time I hesitated between two very different aspects of infinite dimensional holomorphy the geometric algebraic theory associated with bounded symmetric domains and Jordan triple systems and the topological theory which forms the subject of the present book Differential Calculus and Holomorphy Jean François Colombeau, 1982 **Geometric**

Bierstedt, J. Bonet, J. Horváth, M. Maestre, 1992-01-10 This volume includes a collection of research articles in Functional Analysis celebrating the occasion of Manuel Valdivia's sixtieth birthday The papers included in the volume are based on the main lectures presented during the international functional analysis meeting held in Peñíscola Valencia Spain in October 1990 During his career Valdivia has made contributions to a wide variety of areas of Functional Analysis and his work has had a profound impact A thorough appreciation of Valdivia's work is presented in J Horváth's article In honor of Valdivia's achievements this volume presents more than twenty five papers on topics related to his research Banach spaces operator ideals tensor products Fréchet DF and LF spaces distribution theory infinite holomorphy etc While the majority of papers are research articles survey articles are also included The book covers a broad spectrum of interests in today's Functional Analysis and presents new results by leading specialists in the field **Finite or Infinite Dimensional Complex Analysis and Applications** Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01

There is almost no field in Mathematics which does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or Infinite Dimensional Complex Analysis and Applications which took place in Hanoi from August 8-12 2001 This conference th

was the 9 one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first one took place th at Pusan University in Korea in 1993 The preceding 8 conference was th held in Shandong in China in August 2000 The 9 conference of the was the first one which took place above mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions 1 Value distribution theory including meromorphic funtions mero morphic mappings as well as p adic functions over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many com plex variables 3 Clifford Analysis i e complex methods in higher dimensional real Euclidian spaces 4 Generalized analytic functions

Descriptive Topology in Selected Topics of Functional Analysis Jerzy Kąkol, Wiesław Kubiś, Manuel López-Pellicer, 2011-08-30 Descriptive Topology in Selected Topics of Functional Analysis is a collection of recent developments in the field of descriptive topology specifically focused on the classes of infinite dimensional topological vector spaces that appear in functional analysis Such spaces include Fr chet spaces LF spaces and their duals and the space of continuous real valued functions $C(X)$ on a completely regular Hausdorff space X to name a few These vector spaces appear in functional analysis in distribution theory differential equations complex analysis and various other analytical settings This monograph provides new insights into the connections between the topological properties of linear function spaces and their applications in functional analysis
