

Endangered Species

There are about 8.7 million species of animals on earth but some scientists think that 40% of them might soon be gone! A species of animals is called endangered when there aren't that many of them left. If a species is endangered it means that they are in danger of becoming extinct.

Interesting Fact

There are only about 200 White Tigers left in the entire World!

Why Do Species Become Endangered?

Some species of animals become endangered because of events in nature that are beyond anyone's control. These include volcanoes erupting and long periods of extremely cold weather, like an Ice Age. Though these natural events do happen, most species become endangered because of the behavior of humans. Pollution and the overuse of pesticides have put many animal species at risk. Humans have damaged the habitats of many animal species leaving them nowhere to live or get food. Also, people have brought in species of animals and plants that do not normally live in an area. These new species can harm or kill the animals and plants that live there, making them endangered. Finally, human beings have taken animals out of their natural habitats and have put them in new ones to make room for building houses, cities, etc. When these species are forced to live somewhere different, they cannot survive.

Species - A grouping of animals that can have children together.

Extinct - A species that no longer exists.

Pesticides - Chemicals that are used to kill insects that hurt crops.

Habitat - Where a plant or animal naturally lives.

Comprehension Exercises About Endangered Animals
