Computational Intelligence In Expensive Optimization Problems Author Yoel Tenne Jun 201:

Computational Intelligence for Optimization Nirwan Ansari, Edwin Hou, 2012-12-06 The field of optimization is interdisciplinary in nature and has been making a significant impact on many disciplines As a result it is an indispensable tool for many practitioners in various fields Conventional optimization techniques have been well established and widely published in many excellent textbooks However there are new techniques such as neural networks simulated annealing stochastic machines mean field theory and genetic algorithms which have been proven to be effective in solving global optimization problems This book is intended to provide a technical description on the state of the art development in advanced optimization techniques specifically heuristic search neural networks simulated annealing stochastic machines mean field theory and genetic algorithms with emphasis on mathematical theory implementation and practical applications The text is suitable for a first year graduate course in electrical and computer engineering computer science and operational research programs It may also be used as a reference for practicing engineers scientists operational researchers and other specialists This book is an outgrowth of a couple of special topic courses that we have been teaching for the past five years In addition it includes many results from our interdisciplinary research on the topic The aforementioned advanced optimization techniques have received increasing attention over the last decade but relatively few books have been produced

Foundations of Computational Intelligence Volume 3 Ajith Abraham, Aboul-Ella Hassanien, Patrick Siarry, Andries Engelbrecht, 2009-05-01 Global optimization is a branch of applied mathematics and numerical analysis that deals with the task of finding the absolutely best set of admissible conditions to satisfy certain criteria objective functions formulated in mathematical terms Global optimization includes nonlinear stochastic and combinatorial programming multiobjective programming control games geometry approximation algorithms for parallel architectures and so on Due to its wide usage and applications it has gained the attention of researchers and practitioners from a plethora of scientific domains Typical practical examples of global optimization applications include Traveling salesman problem and electrical circuit design minimize the path length safety engineering building and mechanical structures mathematical problems Kepler conjecture Protein structure prediction minimize the energy function etc Global Optimization algorithms may be categorized into several types Deterministic example branch and bound methods Stochastic optimization example simulated annealing Heuristics and meta heuristics example evolutionary algorithms etc Recently there has been a growing interest in combining global and local search strategies to solve more complicated optimization problems This edited volume comprises 17 chapters including several overview Chapters which provides an up to date and state of the art research covering the theory and algorithms of global optimization Besides research articles and expository papers on theory and algorithms of global optimization papers on numerical experiments and on real world applications were also encouraged The book is divided into 2 main parts

Extremal Optimization Yong-Zai Lu, Yu-Wang Chen, Min-Rong Chen, Peng Chen, Guo-Qiang Zeng, 2018-09-03 Extremal

Optimization Fundamentals Algorithms and Applications introduces state of the art extremal optimization EO and modified EO MEO solutions from fundamentals methodologies and algorithms to applications based on numerous classic publications and the authors recent original research results It promotes the movement of EO from academic study to practical applications The book covers four aspects beginning with a general review of real world optimization problems and popular solutions with a focus on computational complexity such as NP hard and the phase transitions occurring on the search landscape Next it introduces computational extremal dynamics and its applications in EO from principles mechanisms and algorithms to the experiments on some benchmark problems such as TSP spin glass Max SAT maximum satisfiability and graph partition It then presents studies on the fundamental features of search dynamics and mechanisms in EO with a focus on self organized optimization evolutionary probability distribution and structure features e g backbones which are based on the authors recent research results Finally it discusses applications of EO and MEO in multiobjective optimization systems modeling intelligent control and production scheduling The authors present the advanced features of EO in solving NP hard problems through problem formulation algorithms and simulation studies on popular benchmarks and industrial applications They also focus on the development of MEO and its applications This book can be used as a reference for graduate students research developers and practical engineers who work on developing optimization solutions for those complex systems with hardness that cannot be solved with mathematical optimization or other computational intelligence such as evolutionary computations

Multi-objective Optimization in Computational Intelligence Lam Thu Bui, Sameer Alam, 2008 Multi objective optimization MO is a fast developing field in computational intelligence research Giving decision makers more options to choose from using some post analysis preference information there are a number of competitive MO techniques with an increasingly large number of MO real world applications Multi Objective Optimization in Computational Intelligence Theory and Practice explores the theoretical as well as empirical performance of MOs on a wide range of optimization issues including combinatorial real valued dynamic and noisy problems This book provides scholars academics and practitioners with a fundamental comprehensive collection of research on multi objective optimization techniques applications and practices

Multi-Objective Optimization Using Artificial Intelligence Techniques Seyedali Mirjalili, Jin Song Dong, 2020 This book focuses on the most well regarded and recent nature inspired algorithms capable of solving optimization problems with multiple objectives Firstly it provides preliminaries and essential definitions in multi objective problems and different paradigms to solve them It then presents an in depth explanations of the theory literature review and applications of several widely used algorithms such as Multi objective Particle Swarm Optimizer Multi Objective Genetic Algorithm and Multi objective GreyWolf Optimizer Due to the simplicity of the techniques and flexibility readers from any field of study can employ them for solving multi objective optimization problem The book provides the source codes for all the proposed algorithms on a dedicated webpage
