Computational Intelligence And Feature Selection:

Computational Intelligence and Feature Selection Richard Jensen, Qiang Shen, 2008-10-03 The rough and fuzzy set approaches presented here open up many new frontiers for continued research and development Computational Intelligence and Feature Selection provides readers with the background and fundamental ideas behind Feature Selection FS with an emphasis on techniques based on rough and fuzzy sets For readers who are less familiar with the subject the book begins with an introduction to fuzzy set theory and fuzzy rough set theory Building on this foundation the book provides A critical review of FS methods with particular emphasis on their current limitations Program files implementing major algorithms together with the necessary instructions and datasets available on a related Web site Coverage of the background and fundamental ideas behind FS A systematic presentation of the leading methods reviewed in a consistent algorithmic framework Real world applications with worked examples that illustrate the power and efficacy of the FS approaches covered An investigation of the associated areas of FS including rule induction and clustering methods using hybridizations of fuzzy and rough set theories Computational Intelligence and Feature Selection is an ideal resource for advanced undergraduates postgraduates researchers and professional engineers However its straightforward presentation of the underlying concepts makes the book meaningful to specialists and nonspecialists alike

Computational Intelligence for High-Dimensional Machine Learning Yu Zhou, Xiao Zhang, Sam Kwong, 2025-03-26 This book focuses on the modelling and optimization aspects of the feature selection problem through computational intelligence methods in complex high dimensional supervised machine learning To aid readers in conducting research in this field it covers fundamental concepts and state of the art algorithms This book also provides a detailed insight into applying these algorithms into real world applications The authors begin by introducing the definition high dimensional machine learning ML problems and the challenges they pose Subsequently they delve into dimension reduction methods for high dimensional ML including global and local feature selection FS techniques This book also comprehensively presents computational intelligence methods such as evolutionary computation and deep neural networks for FS supported by both theoretical and empirical evidence Furthermore this book explores real world scenario applications involving high dimensional ML particularly in the context of smart cities bioinformatics and industrial informatics This book is a suitable read for postgraduates and researchers who are interested in the research areas of computational intelligence soft computing machine learning and deep learning Professionals and practitioners within these related fields will also benefit from this book

Advances in IoT and Security with Computational Intelligence Anurag Mishra, Deepak Gupta, Girija Chetty, 2023-09-22 The book is a collection of peer reviewed best selected research papers presented at the International Conference on Advances in IoT and Security with AI ICAISA 2023 organized by Deen Dayal Upadhyaya College University of Delhi New Delhi India in collaboration with University of Canberra Canberra Australia and NIT Arunachal Pradesh Itanagar AP India during March 24 25 2023 The book includes various applications and

technologies in this specialized sector of Industry 4.0. The book is divided into two volumes. It focuses on recent advances in Internet of Things and security with its applications using artificial intelligence. **Computational Intelligence** Dinesh C.S. Bisht, Mangey Ram, 2020-08-10. Computational intelligence (CI) lies at the interface between engineering and computer science control engineering where problems are solved using computer assisted methods. Thus it can be regarded as an indispensable basis for all artificial intelligence (AI) activities. This book collects surveys of most recent theoretical approaches focusing on fuzzy systems, neurocomputing and nature inspired algorithms. It also presents surveys of up to date research and application with special focus on fuzzy systems as well as on applications in life sciences and neuronal computing.

Computational Intelligence and Quantitative Software Engineering Witold Pedrycz, Giancarlo Succi, Alberto Sillitti, 2016-01-14. In a down to the earth manner the volume lucidly presents how the fundamental concepts, methodology and algorithms of Computational Intelligence are efficiently exploited in Software Engineering and opens up a novel and promising avenue of a comprehensive analysis and advanced design of software artifacts. It shows how the paradigm and the best practices of Computational Intelligence can be creatively explored to carry out comprehensive software requirement analysis, support design, testing and maintenance. Software Engineering is an intensive knowledge based endeavor of inherent human centric nature which profoundly relies on acquiring semiformal knowledge and then processing it to produce a running system. The knowledge spans a wide variety of artifacts from requirements captured in the interaction with customers to design practices, testing and code management strategies which rely on the knowledge of the running system. This volume consists of contributions written by widely acknowledged experts in the field who reveal how the Software Engineering benefits from the key foundations and synergistically existing technologies of Computational Intelligence being focused on knowledge representation, learning mechanisms and population based global optimization strategies. This book can serve as a highly useful reference material for researchers, software engineers and graduate students and senior undergraduate students in Software Engineering and its sub disciplines: Internet engineering, Computational Intelligence, management operations research and knowledge based systems. *Computational Intelligence in Multi-Feature Visual Pattern Recognition* Pramod Kumar Pisharady, Prahlad Vadakkepat, Loh Ai Poh, 2014-05-23. This book presents a collection of computational intelligence algorithms that addresses issues in visual pattern recognition such as high computational complexity, abundance of pattern features, sensitivity to size and shape variations and poor performance against complex backgrounds. The book has 3 parts. Part 1 describes various research issues in the field with a survey of the related literature. Part 2 presents computational intelligence based algorithms for feature selection and classification. The algorithms are discriminative and fast. The main application area considered is hand posture recognition. The book also discusses utility of these algorithms in other visual as well as non visual pattern recognition tasks including face recognition, general object recognition and cancer tumor classification. Part 3 presents biologically inspired algorithms for feature extraction. The visual

cortex model based features discussed have invariance with respect to appearance and size of the hand and provide good inter class discrimination A Bayesian model of visual attention is described which is effective in handling complex background problem in hand posture recognition The book provides qualitative and quantitative performance comparisons for the algorithms outlined with other standard methods in machine learning and computer vision The book is self contained with several figures charts tables and equations helping the reader to understand the material presented without instruction
