Database Models And Retrieval Languages:

Text Databases Crist-Jan Doedens,1994 Manipulation of text by means of the computer is well established Everybody has a word processor on his or her desk and electronic mail desk top publishing text interchange languages hypertext and multimedia are technologies many will be aware of However the full potential of the computer for the management and use of textual information has not been tapped yet Far from it For this a more principled approach is necessary which will create a framework on which existing technologies and technologies yet to come can build and in which they can be integrated This book can be seen as one step on this road It employs the experience gained in working with a rich electronic linguistic corpus the ECA database A basic text database model is put forward and several text database retrieval languages are defined and analysed A clear direction for further research is given Therefore the book is of relevance to researchers and developers in the field of corpus linguistics and in the more general field of electronic text

Model-Checking Based Data Retrieval Elisa Quintarelli,2004-02-12 This thesis deals with the problems of characterizing the semantics of and assuring efficient execution for database query languages where the database contains semistructured and time varying information This area of technology is of much interest and significance for databases and knowledge bases it also presents many challenging research problems deserving an in depth investigation Thus the topic of Elisa Quintarelli's dissertation is well chosen and totally appropriate to the current research trends In her thesis Elisa addresses a number of related problems However her work and contributions concentrate on two main problems The first is the definition of an effective graph based approach to the formalization of query languages for semistructured and temporal information In her approach query execution is viewed as the process of matching the query graph with the database instance graph therefore query execution reduces to searching the database for subgraphs that are similar to the given query graph The search for such matches can be supported through the computational process of biosimulation This approach is used to define the semantics of several languages including graphical languages such as G Log and GraphLog semistructured information

languages such as Lorel and temporal languages such as TSS QL Both graph based approaches and biosimulation had been used by previous authors for defining query languages and their semantics however this work goes well beyond previous approaches by integrating and refining these techniques into a flexible and powerful paradigm that Elisa demonstrates to be effective on a spectrum of languages and a suite of alt native semantics

Database and Expert Systems Applications Gerald Quirchmayr, Erich Schweighofer, Trevor J.M. Bench-Capon, 1998-08-14 This book constitutes the refereed proceedings of the 9th International Conference on Database and Expert Systems Applications DEXA 98 held in Vienna Austria in August 1998 The 81 revised full papers presented were carefully selected from a total of more than 200 submissions The papers are organized in sections on active databases object oriented systems data engineering information retrieval workflow and cooperative systems spatial and temporal aspects document management spatial databases adaptation and view updates genetic algorithms cooperative and distributed environments interaction and communication transaction advanced applications temporal aspects oriented systems partitioning and fragmentation database queries data data warehouses knowledge discovery and data mining knowledge extraction and knowledge base reduction for comprehension and reuse

Database and Expert Systems Applications Heinrich C. Mayr, Jiri Lazansky, Gerald Quirchmayr, Pavel Vogel, 2003-06-29 th DEXA 2001 the 12 International Conference on Database and Expert Systems Applications was held on September 3 5 2001 at the Technical University of Munich Germany The rapidly growing spectrum of database applications has led to the establishment of more specialized discussion platforms DaWaK conference EC Web conference and DEXA workshop which were all held in parallel with the DEXA conference in Munich In your hands are the results of much effort beginning with the preparation of the submitted papers The papers then passed through the reviewing process and the accepted papers were revised to final versions by their authors and arranged with the conference program All this culminated in the conference itself A total of 175 papers were submitted to this conference and I would like to thank all the authors They are the real base of the conference The program committee and the supporting reviewers produced altogether 497 referee reports on average of 2 84 reports per paper and selected 93 papers for presentation Comparing the weight or more precisely the number of papers devoted to particular topics at several recent DEXA conferences an increase can be recognized in the areas of XMS databases active databases and multi and hypermedia efforts The space devoted to the more classical topics such as information retrieval distribution and Web aspects and transaction indexing and query aspects has remained more or less unchanged Some decrease is visible for object orientation

Aspects of the Computer-based Patient Record Harold P. Lehmann, Patricia A. Abbott, Nancy K. Roderer, Adam

Rothschild, Steven Mandell, Jorge Ferrer, Robert E. Miller, Marion J. Ball, 2013-06-29 One of the hottest political issues today concerns ways to improve national healthcare systems without incurring further costs An extensive study by the Institute of Medicine IOM in the United States formally reported that computer based patient records are absolutely necessary to help contain the cost explosion in health care The information obtained from experts the studies conducted and the conclusions that went into the IOM s report have now been collected in Aspects of the Computer Based Patient Record A large portion of the volume discusses the state of the art in existing computer based systems as well as the essential needs which must be addressed by future computer based patients records A final section in the book discusses implementation strategies for changing to the electronic system and practical issues Who will bear the final cost How and when will healthcare providers who use the system be trained This volume contains the concise valuable information which hospital administrators hospital systems designers third party payer groups and medical technology providers will need if they hope to successfully transit to hospital systems which use a computer based patient record
