Physical and Chemical Properties

- 1) All matter has what two characteristics (that distinguish it from energy)?
Have mass and takes up space (volume).
- 2) Intensive physical property versus extensive physical property
 - a. What is the difference between the two?
Intensive properties do not depend on the amount of substance present and extensive properties depend on the quantity or the amount of substance.
 - b. Give two examples of each.
Density and boiling point for Intensive.
Mass and volume for Extensive.
 - c. Explain why only intensive physical properties can be used to identify an unknown object.
Intensive properties are unique to a material and remain constant regardless of how much of the material is present. In contrast, extensive properties like mass and volume depend on the sample size and cannot uniquely identify a material.
- 3) What is the difference between a physical change and a chemical change?
A physical change affects the substance's appearance, state, or properties, but its chemical composition remains unchanged and chemical change involves a reaction that alters the substance's chemical composition, resulting in the formation of new substances with different properties.
- 4) Label each of these as Physical (P) or Chemical (C) changes:
 - A. Food going bad (C)
 - B. Gold melting (P)
 - C. Salt dissolving (P)
 - D. Wood burning (C)
 - E. Paper tearing (P)
 - F. Water vaporizing (P)
- 5) Density
 - a. What is density?
Density is a physical that measures how much mass is contained in each volume.

Groutas, Athri D. Rathnayake, 2023-05-19 This fully updated new edition presents organic reaction mechanism questions carefully selected from the primary chemical literature to understand how reactants are transformed into products The author explains step by step solutions to all problems with appropriate contextual comments explaining the rationale and reasoning underlying each step and identifying the underlying principles involved in each question In the process the reader gains a better understanding of the fundamental principles of organic chemistry and how to become proficient in using the Lewis acid Lewis base concept to complete organic reactions without resorting to memorization Features The questions are graded in difficulty with Part A containing questions aimed at students taking the sophomore level organic chemistry class while part B contains questions of somewhat greater difficulty suitable for students taking an honors course in organic chemistry or a beginning graduate course Detailed answers are provided to all questions so students can check their answers and important points are highlighted in each answer Special emphasis has been placed

on the selection of questions to ensure that each question illustrates one or more fundamental principles of organic chemistry. Interspersed throughout the book are minireviews that cover the material pertaining to a particular topic. The specific literature references corresponding to each question are included and students can look up those references for more contextual information. Includes a large number of carefully selected mechanism questions and step by step solutions including explanatory comments.

Concepts of Earth Science & Chemistry Parent Lesson Plan John Hudson

Tiner, 2013-08-26 *Concepts of Earth and Chemistry Course Description* This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student. Materials for each semester are independent of one another to allow flexibility. Semester 1: Earth. Blending a creationism perspective of history with definitions of terms and identification of famous explorers/scientists etc. This book gives students an excellent initial knowledge of people and places, encouraging them to continue their studies in depth. Semester 2: Chemistry. Chemistry is an amazing branch of science that affects us every day yet few people realize it or even give it much thought. Without chemistry there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information.

Goldberg, 2023-05-10 This guide features carefully curated high impact teaching strategies that target learning tools, collaboration structures, reading and writing routines, and assessment opportunities that new and veteran teachers can use to construct dynamic learning experiences for students.

Multiple Solution Methods for Teaching Science in the Classroom Stephen DeMeo, 2008 For the first time in science education the subject of multiple solution methods is explored in book form. While a multiple method teaching approach is utilized extensively in math education, there are very few journal articles and no texts written on this topic in science. Teaching multiple methods to science students in order to solve quantitative word problems is important for two reasons. First, it challenges the practice by teachers that one specific method should be used when solving problems. Secondly, it calls into question the belief that multiple methods would confuse students and retard their learning. Using a case study approach and informed by research conducted by the author, this book claims that providing students with a choice of methods as well as requiring additional methods as a way to validate results can be beneficial to student learning. A close reading of the literature reveals that time spent on elucidating concepts rather than on algorithmic methodologies is a critical issue when trying to have students solve problems with understanding. It is argued

that conceptual understanding can be enhanced through the use of multiple methods in an environment where students can compare evaluate and verbally discuss competing methodologies through the facilitation of the instructor This book focuses on two very useful methods proportional reasoning PR and dimensional analysis DA These two methods are important because they can be used to solve a large number of problems in all of the four academic sciences biology chemistry physics and earth science This book concludes with a plan to integrate DA and PR into the academic science curriculum starting in late elementary school through to the introductory college level A challenge is presented to teachers as well as to textbook writers who rely on the single method paradigm to consider an alternative way to teach scientific problem solving
