Data Networks Bertsekas Solution Manual Flow Control:

Data Networks Dimitri Bertsekas, Robert Gallager, 2021-10-02 This classic textbook aims to provide a fundamental understanding of the principles that underlie the design of data networks which form the backbone of the modern internet. It was developed through classroom use at MIT in the 1980s and continues to be used as a textbook in MIT classes. The present edition also contains detailed high quality solutions to all the end of chapter exercises. Among its major features the book 1 Describes the principles of layered architectures 2 Explains the principles of data link control with many examples and insights into distributed algorithms and protocols 3 Provides an intuitive coverage of queueing and its applications in delay and performance analysis of networks 4 Covers the theory of multiaccess communications and local data networks 5 Discusses in depth theoretical and practical aspects of routing and topological design 6 Covers the theory of flow control emphasizing issues of congestion and delay in integrated high speed networks

Artificial Intelligent Approaches in Petroleum Geosciences Constantin Cranganu, Henri Luchian, Mihaela Elena Breaban, 2015-04-20 This book presents several intelligent approaches for tackling and solving challenging practical problems facing those in the petroleum geosciences and petroleum industry. Written by experienced academics this book offers state of the art working examples and provides the reader with exposure to the latest developments in the field of intelligent methods applied to oil and gas research exploration and production. It also analyzes the strengths and weaknesses of each method presented using benchmarking whilst also emphasizing essential parameters such as robustness accuracy speed of convergence computer time overlearning and the role of normalization. The intelligent approaches presented include artificial neural networks fuzzy logic active learning method genetic algorithms and support vector machines amongst others. Integration handling data of immense size and uncertainty and dealing with risk management are among crucial issues in petroleum geosciences. The problems we have to solve in this domain are becoming too complex to rely on a single discipline for effective solutions and the costs associated with poor predictions e.g. dry holes increase. Therefore there is a need to establish a new approach aimed at proper integration of disciplines such as petroleum engineering geology geophysics and geochemistry data fusion risk reduction and uncertainty management. These intelligent techniques can be used for uncertainty analysis risk assessment data fusion and mining data analysis and interpretation and knowledge discovery from diverse data such as 3D seismic geological data well logging and production data.
