Climate Change and Crop Production Matthew P. Reynolds, 2010 Trends in population growth suggest that global food production is unlikely to satisfy future demand under predicted climate change scenarios unless rates of crop improvement are accelerated This book provides an overview of the essential disciplines required for sustainable crop production in unpredictable environments *Climate Change Impact and Adaptation in Agricultural Systems* Jurg Fuhrer, Peter J Gregory, 2014-06-18 The focus of this book is future global climate change and its implications for agricultural systems which are the main sources of agricultural goods and services provided to society These systems are either based on crop or livestock production or on combinations of the two with characteristics that differ between regions and between levels of management intensity In turn they also differ in their sensitivity to projected future changes in climate and improvements to increase climate resilience need to be tailored to the specific needs of each system The book will bring together a series of chapters that provide scientific insights to possible implications of projected climate changes for different important types of crop and livestock systems and a discussion of options for adaptive and mitigative management
