

Ch 16, 17, 22 Post-Competency Questions

1. Discuss changes in the urinary system due to aging

Some include where the kidneys do not filter the blood efficiently, bladder muscle tone weakens, bladder holds less urine (= frequent urination), and bladder doesn't empty completely (= increased chances of infection).

2. List normal qualities of urine and identify signs and symptoms to report about urine

Urine is normally light, pale yellow, or amber in color but also may depend on some food. It should also be clear or transparent and have a faint smell but certain conditions may change the order. Urine should be reported when it's cloudy; dark or rust-colored; strong-, offensive-, or fruity-smelling; pain, burning, or pressure; blood, pus, mucus, or discharge; episodes of incontinence; and frequent small voiding.

3. List factors affecting urination and describe how to promote normal urination

Factors that affect urination are growth/development, psychological factors, fluid intake, physical activity, personal habits, medication, and disorders. Normal urination can be promoted by encouraging fluids, providing privacy, encouraging regular walks, raising the head of the bed, and offering a trip to the bathroom often.

4. Discuss common disorders of the urinary system

Common disorders of the urinary system are UTIs, chronic renal failures, and urine retention.

5. Discuss reasons for incontinence

Incontinence may be because of increased intra-abdominal pressure, abrupt urge to void, overflow/overdistention of bladder, and environmental, cognitive, and physical reasons.

6. Describe catheters and related care

Straight catheters are removed each time the urine is drained, while indwelling catheters are for a period. Condom catheters are solely males to be attached externally. They should be cleaned at least 4 inches from the meatus.

7. Explain how to collect different types of urine specimens

Routine urine specimens can be collected whenever the resident voids into a bedpan, urinal, commode, or hat. Clean-catch specimen is where the NA doesn't collect the first and last urine. 24-hour urine specimen collects all urine in a 24-hour period.

8. Explain types of tests that are performed on urine

Urine can be tested for pH, glucose, ketones, blood, and specific gravity.

9. Explain guidelines for assisting with bladder retraining

Some guidelines include providing privacy, praising attempts and successes in controlling the bladder, and keeping accurate I&O records.
