Computer Processing Of Remotely Sensed Images An Introduction 2nd Edition:

Computer Processing of Remotely-Sensed Images Paul M. Mather, 1999 Computer Processing of Remotely Sensed Images An Introduction Second Edition Paul M Mather School of Geography The University of Nottingham UK Remotely sensed images of the Earth's surface provide an invaluable source of information about the geographical distribution of natural and cultural features as well as a record of changes in environmental conditions over decadal time scales The second edition of this successful book provides an accessible introduction to the processing and analysis of digital images collected by aircraft and satellite borne sensors that operate in the visible infrared and microwave regions of the spectrum The book begins with a survey of the physical principles of remote sensing and goes on to consider the nature and sources of remotely sensed data A short survey of those aspects of computing that are relevant to remote sensing completes the introductory section of the book In the remaining five chapters the author surveys those aspects of image processing and pattern recognition that are relevant to remote sensing applications including pre processing enhancement image transforms and filtering techniques An extended survey of classification and related methods including neural networks fuzzy classifiers and spectral unmixing forms the final chapter A unique feature of this book is the provision of a CD ROM containing software and image data sets The MIPS image display program provides facilities for image display enhancement filtering classification and arithmetic 38 additional programs are provided covering applications including maximum likelihood classification spectral unmixing geometric correction principal components analysis All of these programs run on a standard PC using the Windows 95 operating system In addition more than 25 image data sets collected by the Landsat MSS and TM SPOT HRV NOAA AVHRR and RADARSAT SAR are contained on the CD ROM making this book a complete package textbook software and data for advanced undergraduate and Masters courses It can also be used by postgraduate research students as a survival guide

Computer Processing of Remotely-Sensed Images Paul M. Mather, Magaly Koch, 2011-07-28 This fourth and full colour edition updates and expands a widely used textbook aimed at advanced undergraduate and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments Existing material has been brought up to date and new material has been added In particular a new chapter exploring the two way links between remote sensing and environmental GIS has been added New and updated material includes A website at www.wiley.com/go/mather4 that provides access to an updated and expanded version of the MIPS image processing software for Microsoft Windows PowerPoint slideshows of the figures from each chapter and case studies including full data sets Includes new chapter on Remote Sensing and Environmental GIS that provides insights into the ways in which remotely sensed data can be used synergistically with other spatial data sets including hydrogeological and archaeological applications New section on image processing from a computer science perspective presented in a non technical way including some remarks on statistics New material on image transforms including the analysis of temporal change and data fusion techniques New

material on image classification including decision trees support vector machines and independent components analysis and Now in full colour throughout This book provides the material required for a single semester course in Environmental Remote Sensing plus additional more advanced reading for students specialising in some aspect of the subject It is written largely in non technical language yet it provides insights into more advanced topics that some may consider too difficult for a non mathematician to understand The case studies available from the website are fully documented research projects complete with original data sets For readers who do not have access to commercial image processing software MIPS provides a licence free intuitive and comprehensive alternative

Advanced Image Processing Techniques for Remotely Sensed Hyperspectral Data Pramod K. Varshney,Manoj K. Arora,2013-03-09 The first of its kind this book reviews image processing tools and techniques including Independent Component Analysis Mutual Information Markov Random Field Models and Support Vector Machines The book also explores a number of experimental examples based on a variety of remote sensors The book will be useful to people involved in hyperspectral imaging research as well as by remote sensing data like geologists hydrologists environmental scientists civil engineers and computer scientists

Sustainable Urban and Regional Infrastructure Development: Technologies, Applications and Management Yigitcanlar, Tan,2010-05-31 This book aims to bridge the gap in the current literature by addressing the overall problems present in major infrastructure in society and the technologies that may be applied to overcome these problems Provided by publisher

Advances in Passive Microwave Remote Sensing of Oceans Victor Raizer,2017-03-27 This book demonstrates the capabilities of passive microwave technique for enhanced observations of ocean features including the detection of sub surface events and or disturbances while laying out the benefits and boundaries of these methods It represents not only an introduction and complete description of the main principles of ocean microwave radiometry and imagery but also provides guidance for further experimental studies Furthermore it expands the analysis of remote sensing methods models and techniques and focuses on a high resolution multiband imaging observation concept Such an advanced approach provides readers with a new level of geophysical information and data acquisition granting the opportunity to improve their expertise on advanced microwave technology now an indispensable tool for diagnostics of ocean phenomena and disturbances

Information Sources in the Social Sciences David Fisher,Sandra Price,Terry Hanstock,2018-02-19 No detailed description available for Information Sources in the Social Sciences

GIS Fundamentals Stephen Wise,2018-09-03 With GIS technology increasingly available to a wider audience on devices from apps on smartphones to satnavs in cars many people routinely use spatial data in a way which used to be the preserve of GIS specialists However spatial data is stored and analyzed on a computer still tends to be described in academic texts and articles which require specialist knowledge or some training in computer science Developed to introduce computer science literature to geography students *GIS Fundamentals* Second Edition provides an accessible examination of the underlying principles for anyone with no formal training in computer

science See What's New in the Second Edition Coverage of the use of spatial data on the Internet Chapters on databases and on searching large databases for spatial queries Improved coverage on route finding Improved coverage of heuristic approaches to solving real world spatial problems International standards for spatial data The book begins with a brief but detailed introduction to how computers work and how they are programmed giving anyone with no previous computer science background a foundation to understand the remainder of the book As with all parts of the book there are also suggestions for further sources of reading The book then describes the ways in which vector and raster data can be stored and how algorithms are designed to perform fundamental operations such as detecting where lines intersect From these simple beginnings the book moves into the more complex structures used for handling surfaces and networks and contains a detailed account of what it takes to determine the shortest route between two places on a network The final sections of the book review problems such as the Travelling Salesman problem which are so complex that it is not known whether an optimum solution exists Using clear concise language but without sacrificing technical rigour the book gives readers an understanding of what it takes to produce systems which allow them to find out where to make their next purchase and how to drive to the right place to collect it

Proceedings of the First International Workshop on the Analysis of Multi-temporal Remote Sensing Images Lorenzo Bruzzone, 2002 The development of effective methodologies for the analysis of multi temporal data is one of the most important and challenging issues that the remote sensing community will face in the next few years The relevance and timeliness of this issue are directly related to the ever increasing quantity of multi temporal data provided by the numerous remote sensing satellites that orbit our planet The synergistic use of multi temporal remote sensing data and advanced analysis methodologies results in the possibility of solving complex problems related to the monitoring of the Earth's surface and atmosphere This book brings together the methodological aspects of multi temporal remote sensing image analysis real applications and end user requirements presenting the state of the art in this field and contributing to the definition of common research priorities Researchers and graduate students in the fields of remote sensing image analysis and environmental monitoring will appreciate the interdisciplinary approach thanks to the articles written by experts from different scientific communities

Remote Sensing Imagery for Natural Resources Monitoring David S. Wilkie, John T. Finn, 1996 The Cambrian radiation was the explosive evolution of marine life that started 550 000 000 years ago It ranks as one of the most important episodes in Earth history This key event in the history of life on our planet changed the marine biosphere and its sedimentary environment forever requiring a complex interplay of wide ranging biologic and nonbiologic processes The Ecology of the Cambrian Radiation offers a comprehensive and surprising picture of the Earth at that ancient time The book contains contributions from thirty three authors hailing from ten countries and will be of interest to paleontologists geologists biologists and other researchers interested in the global Earth life system
