Transplantation Jane N. Winter, 2012-12-06 Blood Stem Cell Transplantation conveys the excitement that accompanies the newest developments in hematopoietic stem cell transplantation Some of the applications that stand to impact this field most significantly are based on recent advances in the biological sciences as demonstrated by the chapters on gene therapy on the detection of minimal residual disease using molecular techniques and on the use of radioimmunoconjugates targeting lymphoma and leukemia associated antigens Others are the results of clinical observations e.g. the association between graft versus host disease GVHD and durable remissions that have led to creative clinical experiments such as donor leukocyte

infusions DLI Attempts to unravel the biological events that underlie the responses seen in patients with relapsed chronic myelogenous leukemia treated with DLI are likely to provide the basis for future refinements in this clinical approach Hopefully improved response rates and reduced toxicity will result The power of the immunologic response in controlling malignant disease is underscored in the chapter on post transplant immunotherapy The complex immunologic process that results in clinical GVHD may be dissected and engineered to provide clinical benefits that include in addition to its antineoplastic effects the amelioration of its clinical manifestations Better control of GVHD with less global immunosuppression will facilitate the use of mismatched and unrelated donors This area of investigation perfectly illustrates the continued interplay between the laboratory and the clinic The continued cross fertilization of ideas between immunologists molecular biologists and clinical investigators is likely to yield important advances in this field for years to come Possible applications of stem cell transplantation continue to grow with the identification of alternative sources of stem cells and the potential to engineer and orexpand the graft Although the use of unrelated and mismatched donors continues to increase the possibilities associated with umbilical cord blood transplantation are legion especially if stem cells can be expanded ex vivo to provide grafts for full sized adults Using techniques in which contaminating malignant cells may be eliminated from autografts through positive selection autologous transplantation may prove highly effective especially when coupled with post transplant immunotherapy Some of these same methodologies have helped facilitate the use of autologous grafts for transplantation in patients with chronic myelogenous leukemia without allogeneic donors Advances in the supportive care of transplant patients including the pretransplant identification of those at risk from pulmonary complications and the use of cytokines to speed engraftment have reduced morbidity and mortality to such a degree that it is appropriate to consider high dose therapy and stem cell reconstitution in patients with nonmalignant diseases The impressive advances that have occurred in transplantation for thalassemia are described by pioneers in their area of investigation The burgeoning field of transplantation for autoimmune disorders including its immunobiologic basis and soon to be realized clinical potential is also summarized Continued progress in the use of high dose therapy with stem cell rescue for the treatment of pediatric tumors which derives in part from improved supportive care is detailed The sobering voice of the health care economists underscores the necessary limitations to our seemingly unbridled imagination Cost consciousness and financial know how will need to be reflected in future study designs Given the seemingly endless applications of our technology strategies to insure its cost effectiveness will be necessary Continued financial support for laboratory investigation and for the clinical experiments they generate will be required if we are to go forward Blood Stem Cell Transplantation lays the foundation for many of these future advances it is incumbent upon us all to insure its realization
